This book highlights new developments in the teaching and learning of algebraic thinking with 5 to 12 year olds. Based on empirical findings gathered in several countries on five continents it provides a wealth of best practices for teaching early algebra. Building on the work of the ICME 13 International Congress on Mathematical Education Topic Study Group 10 on Early Algebra well known authors such as Luis Radford, John Mason, Maria Blanton, Deborah Schifter and Max Stephens as well as younger scholars from Asia, Europe, South Africa, the Americas, Australia and New Zealand present novel theoretical perspectives and their latest findings. The book is divided into three parts that focus on i) epistemological mathematical aspects of algebraic thinking ii) learning and iii) teaching and teacher development. Some of the main threads running through the book are the various ways in which structures can express themselves in children's developing algebraic thinking, the roles of generalization and natural language and the emergence of symbolism. Presenting vital new data from international contexts, the book provides additional support for the position that essential ways of thinking algebraically need to be intentionally fostered in instruction from the earliest grades. *Making Pre-Algebra Come Alive* Alfred S. Posamentier, 2000-07-21. *Activities in Pre Algebra* is a set of versatile enrichment exercises that covers a very broad range of mathematical topics and applications from the Moebius strip to the googol. Several criteria have been used in developing the activities and in selecting the topics that are included. All of them bear heavily and equally on our concerns for curriculum goals and classroom management. Each activity is presented as a reproducible student investigation. It is followed by guidelines and notes for the teacher. Each activity is keyed to the National Council of Teachers of Mathematics (NCTM) Standards Revised. This link to the NCTM standards allows teachers to facilitate linking classroom activities to specific state and school district content standards. First and foremost the activities are meant to be motivational. As much as possible we want this book to achieve the goal of being attractive to people who thought they didn't like mathematics. To accomplish this it is necessary for the activities to be quite different from what students encounter in their basal texts, different in both substance and form. This seems especially critical no matter how excellent a basal text is being used, nearly every class experiences the blahs. Unfortunately this sort of boredom is often well entrenched long before the teacher and perhaps even the students are aware of it. Presenting activities on a regular basis gives the variety and change of pace needed to sustain interest in any subject. **Math Programs that Work** Mary Ann Lachat, Ronald L. Capasso, Ingrid S.
