from discussion and debate on the hot topic of hydraulic fracturing of wells or fracking for shale gas and its potential to disrupt groundwater systems to the application of highly technical modelling procedures to help solve complex real world problems It is a window on the preoccupations of modern hydrogeologists and an insight into the way in which hydrogeological techniques and methods are being holistically adapted to address problems in the real world This book is targeted at professional hydrogeologists sociologists experts in governance law and policy as well as ecologists and other professionals that nowadays all sit alongside groundwater understanding The book will also appeal to politicians resource managers regulators and others interested in sustainable water supply *Index of Specifications and Standards* ,

Benchmarking in Services Jaideep G. Motwani, Victor E. Sower, 2006 Benchmarking is defined as an improvement process in which a company measures its performance against that of best in class companies determines how those companies achieved their performance levels and uses the information to improve its own performance Bemowski 1992 p 20 Under the best of circumstances benchmarking can be difficult time consuming and costly Service benchmarking is made more difficult than benchmarking in manufacturing because it appears that those things which are important to the customer may differ significantly from one service industry to another Sower et al 2001 Because of the question about the universality of the definition of quality in the service industry and the impact on benchmarking activities the editors obtained as broad a cross section of papers for this special issue as possible The industries represented by the nine papers in this issue cover a broad spectrum of service industries from sports to banking from laboratory services to hospitality and tourism **EPA Publications Bibliography** United States.
