High Dynamic Range Video Karol Myszkowski, Rafal Mantiuk, Grzegorz

Krawczyk, 2022-05-31 As new displays and cameras offer enhanced color capabilities there is a need to extend the precision of digital content High Dynamic Range HDR imaging encodes images and video with higher than normal 8 bit per color channel precision enabling representation of the complete color gamut and the full visible range of luminance However to realize transition from the traditional to HDR imaging it is necessary to develop imaging algorithms that work with the high precision data To make such algorithms effective and feasible in practice it is necessary to take advantage of the limitations of the human visual system by aligning the data shortcomings to those of the human eye thus limiting storage and processing precision Therefore human visual perception is the key component of the solutions we discuss in this book This book presents a complete pipeline for HDR image and video processing from acquisition through compression and quality evaluation to display At the HDR image and video acquisition stage specialized HDR sensors or multi exposure techniques suitable for traditional cameras are discussed Then we present a practical solution for pixel values calibration in terms of photometric or radiometric quantities which are required in some technically oriented applications Also we cover the problem of efficient image and video compression and encoding either for storage or transmission purposes including the aspect of backward compatibility with existing formats Finally we review existing HDR display technologies and the associated problems of image contrast and brightness adjustment For this purpose tone mapping is employed to accommodate HDR content to LDR devices Conversely the so called inverse tone mapping is required to upgrade LDR content for displaying on HDR devices We overview HDR enabled image and video quality metrics which are needed to verify algorithms at all stages of the pipeline Additionally we cover successful examples of the HDR technology applications in particular in computer graphics and computer vision The goal of this book is to present all discussed components of the HDR pipeline with the main focus on video For some pipeline stages HDR video solutions are either not well established or do not exist at all in which case we describe techniques for single HDR images In such cases we attempt to select the techniques which can be extended into temporal domain Whenever needed relevant background information on human perception is given which enables better understanding of the design choices behind the discussed algorithms and HDR equipment
