Nissan Leaf Scheduled Maintenance:

The Energy Switch Peter Kelly-Detwiler, 2021-06-15 The energy industry is changing and it's far more than just solar panels. Electric vehicles look to overtake gasoline-powered cars within our lifetimes; wind farms are popping up in unlikely places; traders are transforming energy into a commodity; and supercomputers are crunching vast amounts of data in nanoseconds while helping to keep our energy grids secure from hackers. The way humans produce, distribute, and consume power will be cleaner, cheaper, and infinitely more complex within the next decade. In *The Energy Switch*, leading energy industry expert Peter Kelly-Detwiler looks at all aspects of the transformation: how we got here, where we are going, and the implications for all of us in our daily lives. Kelly-Detwiler takes readers to the frontlines of the energy revolution. Meet Steve Collins, an executive from Commercial Development Corporation, the company that blew up two 570-million-dollar concrete cooling towers to create a staging ground for the new 70-billion-U.S. offshore wind industry. Rob Threlkeld, a General Motors executive who convinced the auto giant to sign multiple 20-year renewable energy contracts worth hundreds of millions. Kevin McAlpin, a Texas homeowner who buys the power for his home on the electricity spot market where prices can soar from less than one cent a kilowatt-hour to 9.00 over the course of a single day. Dr. Kristin Persson, who oversees a supercomputer that can process data at 30 quadrillion calculations per second in the quest for better renewable energy and battery technologies. And John Davis, a Texas rancher who can keep his land intact with help from the royalty payments from seven turbines spinning on his range. Energy creation and distribution has driven society's progress for centuries. Today, people are increasingly aware that it is imperative that humans move towards a cleaner, digitized, and democratized energy economy. *The Energy Switch* is about that multi-trillion-dollar transformation told from the perspective of those leading us to that bright future.

Artificial Intelligence-Empowered Modern Electric Vehicles in Smart Grid Systems Aparna Kumari, Sudeep Tanwar, 2024-05-23 *Artificial Intelligence Empowered Modern Electric Vehicles in Smart Grid Systems* Fundamentals, Technologies, and Solutions is an essential reference for energy researchers, graduate students, and engineers who aim to understand the opportunities offered by artificial intelligence for the integration of electric vehicles into smart grids. This book begins by building foundational knowledge for the reader, covering the essentials of artificial intelligence and its applications for electric vehicles in a clear and holistic manner. Next, it breaks down two essential areas of application in more detail: energy management (from energy harvesting to demand response) and complex forecasting and market strategies (including peer-to-peer vehicle-to-vehicle and vehicle-to-everything trading, plus the cyber security implications). A final part provides detailed case studies and close consideration of challenges, including code and data sets for replication of techniques. Providing a clear pathway from fundamentals to practical implementation, *Artificial Intelligence Empowered Modern Electric Vehicles in Smart Grid Systems* will provide multidisciplinary guidance for implementing this cutting-edge technology in the energy systems of the future. Supports fundamental understanding of artificial intelligence and its
