

Physical Science 101 - Kinematically Weighting

Proposed:

We want your input on the principle that we propose to use in a new weighting system.

Background:

Because of the nature of the data, we are using a weighting system that is not a simple average. We are using a weighting system that is not a simple average.

Proposed:

1. The data is a set of three values:

A set of three values, independent of the others.

These values:

We will provide the data in a separate report and a separate report on the data in the future.

2. The data is a set of three values: A set of three values, independent of the others. We will provide the data in a separate report and a separate report on the data in the future.

The difference is $\frac{\text{actual value} - \text{expected value}}{\text{actual value}}$ or 100%.

3. The data is a set of three values: A set of three values, independent of the others.

4. The data is a set of three values: A set of three values, independent of the others. We will provide the data in a separate report and a separate report on the data in the future.

5. The data is a set of three values: A set of three values, independent of the others. We will provide the data in a separate report and a separate report on the data in the future.
