In the United Kingdom, the vaccination schedule for children is based on the National Immunisation Schedule, which is a list of diseases that are considered to be most likely to cause serious illness or death. The schedule is updated regularly, and the government provides free vaccinations for all children under the age of 16. In the United States, the vaccination schedule is based on the Advisory Committee on Immunization Practices (ACIP) recommendations, which are based on the latest scientific evidence. The schedule is also updated regularly, and the government provides free vaccinations for all children under the age of 18.

Following a period of deterioration in the overall health of the United States economy, the two countries experienced a significant improvement. While the 1991 results (1.3/1.0) were slightly in their favor, these comparisons reflect short-term gains.
