maintaining the rich fertility of the earth as they recycle nutrients between the living and mineral worlds He then introduces readers to a dazzling array of creatures wolf spiders with glowing red eyes snails with 120 rows of teeth and 10 000 year old fungi among others Organized by taxon Life in the Soil covers everything from slime molds and roundworms to woodlice and dung beetles as well as vertebrates from salamanders to shrews The book ultimately explores the crucial role of soil ecosystems in conserving the worlds above and below ground A unique and illustrative introduction to the many unheralded creatures that inhabit our soils and shape our environment aboveground Life in the Soil will inform and enrich the naturalist in all of us
