Paul Fitzgerald, Md. Tanveer Ahmad, 2018-09-06 In 1944 the Chicago Convention set out the foundations of public international law regulating international air transport but until 2016 no international agreement existed to limit its environmental impact Sustainable Development International Aviation and Treaty Implementation explains why the CORSIA scheme adopted by the International Civil Aviation Organization in 2016 should be implemented in 2020 even though the adequacy of this scheme is still open to doubt and criticism This book seeks to examine the many dimensions of the effort to contain greenhouse gas emissions from aircraft in a manner consonant with the principles of sustainable development and examines the development of international law and policy in an area that has remained largely outside the general framework of international environmental law International civil aviation is a significant polluter of the atmosphere and in this volume a group of air law and sustainable development law specialists considers how the international community can respond Aircraft Surveillance Systems Busyairah Syd Ali, 2017-11-06 The Communication Navigation and Surveillance CNS systems provide air traffic controllers with the information necessary to ensure the specified separation between aircraft and efficient management of airspace as well as assistance to flight crew for safe navigation However the radar systems that support air traffic management ATM and in particular air traffic control ATC are at their operational limit This is particularly acute in the provision of the ATC services in low altitude remote and oceanic areas Limitations in the current surveillance systems include unavailability of services in oceanic and remote areas limited services during extreme weather conditions and outdated equipment with limited availability of spare parts to support system operation These limitations have resulted in fatal accidents This book addresses the limitations of radar to support ATC in various operational environments identified and verified by analysing five years of safety data from Avinor the Air Navigation Service Provider ANSP in Norway It derives a set of taxonomy and from this develops a causal model for incident accident due to limitations in the surveillance system The taxonomy provides a new method for ANSPs to categorize incidents while the causal model is useful for incident accident investigations The book also provides theoretical justifications for the use of Automatic Dependent Surveillance Broadcast ADS B to overcome the limitations of radar systems and identify areas of improvements to enable seamless ATC services

Written in a style that makes it accessible to non specialists Aircraft Surveillance Systems will be of interest to many in the field of aviation particularly ATM safety and accident incident investigation It will also offer a useful reference on this vital topic for air traffic management courses
