way to the identification of strategies for the genetic manipulation of plants It is the aim of this manual to deliver a broad range of these techniques in a form which is accessible to students and research scientists of diverse backgrounds including those with little or no previous experience The themes of the manual aim to reflect those research areas which have been advanced by tissue culture technology As was the case for the sister volume Plant Molecular Biology Manual the objective has been from the start to produce a manual which is at home on the laboratory bench The plastic covered ring bound format has proved to be most popular and is retained here Equally the emphasis has been on producing a collection of detailed step by step protocols each supplemented with an introductory text and practical footnotes to provide the next best thing to a supervisor at one's shoulder
