Production of Biofuels and Chemicals with Ionic Liquids Zhen Fang, Richard L. Smith, Jr., Xinhua Qi, 2013-10-31 The application of ionic liquids to biomass for producing biofuels and chemicals will be one of the hot research areas during the next decade due to the fascinating properties of these versatile group of solvents that allow them to dissolve lignocellulosic materials The present text provides up to date fundamentals state of the art reviews current assessments and prospects in this area including aspects of pretreatment fermentation biomass dissolution cellulose transformation reaction kinetics and physical properties as well as the subsequent production of biofuels and platform chemicals such as sugars aldehydes and acids Auxiliary methods such as catalysis microwave and enzymatic techniques used in the transformations are covered Both researchers and practitioners are certain to find a wealth of information in the individual chapters which were written by experts in the field to provide an essential basis for assessing possible pretreatment and transformation routes of biomass using ionic liquids and for developing new methods and chemical processes Dr Zhen Fang is Professor of Bioenergy head of the Chinese Academy of Sciences Biomass Group Xishuangbanna Tropical Botanical Garden and is also an Adjunct Professor of Life Sciences University of Science and Technology of China Dr

Instrumentation Between Science, State and Industry B. Joerges, T. Shinn, 2012-12-06 these In this book we appropriate their conception of research technology and extend it to many other phenomena which are less stable and less localized in time and space than the Zeeman Cotton situation In the following pages we use the concept for instances where research activities are orientated primarily toward technologies which facilitate both the production of scientific knowledge and the production of other goods In particular we use the term for instances where instruments and methods traverse numerous geographic and institutional boundaries that is fields distinctly different and distant from the instruments and methods initial focus We suggest that instruments such as the ultracentrifuge and the trajectories of the men who devise such artefacts diverge in an interesting way from other forms of artefacts and careers in science metrology and engineering with which students of science and technology are more familiar The instrument systems developed by research technologists strike us as especially general open ended and flexible When tailored effectively research technology instruments potentially fit into many niches and serve a host of unrelated applications Their multi functional character distinguishes them from many other devices which are designed to address specific narrowly defined problems in a circumscribed arena in and outside of science Research technology activities link universities industry public and private research or metrology establishments instrument making firms consulting companies the military and metrological agencies Research technology practitioners do not follow the career path of the traditional academic or engineering professional
