MOP Connection: Waves: sublevels 2 and 3

1. A wave is introduced into a medium and a snapshot of the medium at a particular instant in time is shown at the right. Several positions along the medium are labeled. Categorize the positions as either crests or troughs.

Crests: _____ Troughs: _____ Neither: _____

2. The wavelength of the wave in the diagram below is given by letter _____ and the amplitude of the wave in the diagram below is given by letter _____.

3. A sine curve that represents a transverse wave is drawn below. Use the centimeter ruler to measure the wavelength and amplitude of the wave (show units).

a. Wavelength = _____

b. Amplitude = _____

4. The number of cycles of a periodic wave per unit time is called the wave's _____.
5. Any repeated and periodic motion can be described by a frequency. For instance, the frequency of rotation of a second hand on a clock is _____.
- a. 1/60 Hz b. 1/12 Hz c. 1/2 Hz d. 1 Hz e. 60 Hz
6. A pendulum makes 40 vibrations in 20 seconds. Calculate its period?

Throughout this unit, internalize the meaning of terms such as period, frequency, wavelength and speed. Utilize the meaning of these terms to answer conceptual questions; avoid formula fixation.

Introductory Physics for the Life Sciences: Mechanics (Volume One) David V. Guerra, 2023-05-09 This textbook provides an accessible introduction to physics for

undergraduate students in the life sciences including those majoring in all branches of biology biochemistry and psychology and students working on pre professional programs such as pre medical pre dental and physical therapy The text is geared for the algebra based physics course often named College Physics in the United States The order of topics studied are such that most of the problems in the text can be solved with the methods of Statics or Dynamics That is they require a free body diagram the application of Newton's Laws and any necessary kinematics Constructing the text with a standardized problem solving methodology simplifies this aspect of the course and allows students to focus on the application of physics to the study of biological systems Along the way students apply these techniques to find the tension in a tendon the sedimentation rate of red blood cells in haemoglobin the torques and forces on a bacterium employing a flagellum to propel itself through a viscous fluid and the terminal velocity of a protein moving in a Gel Electrophoresis device This is part one of a two volume set volume 2 introduces students to the conserved quantities and applies these problem solving techniques to topics in Thermodynamics Electrical Circuits Optics and Atomic and Nuclear Physics always with continued focus on biological applications Key Features Organised and centred around analysis techniques not traditional Mechanics and E M Presents a unified approach in a different order meaning that the same laboratories equipment and demonstrations can be used when teaching the course Demonstrates to students that the analysis and concepts they are learning are critical to the understanding of biological systems
