Force on a Current Carrying Wire Lab

Introduction

Two experiments were performed to determine the magnetic field strength of the field between two bar magnets. A current carrying wire was fixed in position between two bar magnets which were attached to a "U shaped" piece of steel, which was placed on a balance, as shown in the diagrams below.

Figure 1

Figure 2

In the first experiment the length of the wire in the magnetic field was constant and the current through the wire was varied, the reading on the balance was measured.

In the second experiment the current through the wire was constant and the length of the wire in the magnetic field was varied, the reading on the balance was measured.

The results of each experiment are given below in each table for experiment, you will use the data to determine the strength of the magnetic field.
