

A Scene Analysis in Bonnie and Clyde Film

Scene Analysis

The scene in Arthur Penn's film *Bonnie and Clyde* where Bonnie and Clyde share their first kiss is a perfect representation of a complete scene with cinematic meaning to the theme of the movie itself. The scene begins with a medium shot of Bonnie arranging her necklace in the mirror. She sings a song from a movie that she and Clyde had just viewed. She recites the lines, "We're in the money, we're in the money". Bonnie's singing causes Clyde to look at her, and her words prompt Clyde to ask her if she would rather have a rich man to look after her, than a thief who can't give her the care she needs. Bonnie insists that she doesn't want rich man, and Clyde's lifestyle is fine for her. Clyde kisses her, but before they go further, Clyde backs away and tells Bonnie that he isn't a "lover boy".

For this sequence of shots to be considered a scene, there needs to be a clear beginning and end. Both the beginning and the end of the scene are clearly marked by fade-ins and fade-outs- classic methods of jumping from scene to scene. This scene also is its own mark in time; the scene before and the scene after are at different times than this scene. The break in time makes this particular sequence stand out as its own individual scene.

The cinematography and the mise en scène of this scene enhance the deeper meaning of *Bonnie and Clyde*- Clyde's struggle with his sexuality. The lighting in this scene is constant; even before Clyde pulls down the shade over the window, the lighting is dark and dull. The lighting comes from a single source, and the scene is lit from the side, creating a strong contrast between light and shadow. The lighting is soft and warm, and the scene is lit from the side, creating a strong contrast between light and shadow. The lighting is soft and warm, and the scene is lit from the side, creating a strong contrast between light and shadow.

It also helps all police and forensic professionals to develop their understanding of the various analysis techniques available as well as the pitfalls to avoid. The fifteen chapters offer structured advice on the techniques involved in the preservation recovery packaging and storage of different evidential types such as fingerprints DNA glass footwear paint and fibres. An overview of the science behind the various types of forensic analysis is presented alongside the relevant legislation to reinforce the value of accurate crime scene management within the duration of an investigation and practical tips scenarios and knowledge checks help to test understanding and root best practice within everyday policing. Each practical guide contains clear and detailed explanations of the relevant legislation accompanied by practical scenarios illustrative diagrams and useful checklists. Packed with a wealth of information the Blackstone's Practical Policing Series ensures you have ready access to the tools you need to take on any policing challenge.

Invariants for Pattern Recognition and Classification Marcos A. Rodrigues, 2000 This book was conceived from the realization that there was a need to update recent work on invariants in a single volume providing a useful set of references and pointers to related work. Since the publication in 1992 of J L Mundy and A Zisserman's *Geometric Invariance in Computer Vision* the subject has been evolving rapidly. New approaches to invariants have been proposed and novel ways of defining and applying invariants to practical problem solving are testimony to the fundamental importance of the study of invariants to machine vision. This book represents a snapshot of current research around the world. A version of this collection of papers has appeared in the *International Journal of Pattern Recognition and Artificial Intelligence* December 1999. The papers in this book are extended versions of the original material published in the journal. They are organized into two categories foundations and applications. Foundation papers present new ways of defining or analyzing invariants and application papers present novel ways in which known invariant theory is extended and effectively applied to real world problems in interesting and difficult contexts. Each category contains roughly half of the papers but there is considerable overlap. All papers carry an element of novelty and generalization that will be useful to theoreticians and practitioners alike. It is hoped that this volume will be not only useful but also inspirational to researchers in image processing pattern recognition.
