Aerodynamic Design of Transport Aircraft Tobie van den Berg, 2009-04-15 The origin of Aerodynamic Design of Transport Aircraft stems from the time when the author was appointed part time professor in the Aerospace Faculty of Delft University of Technology At the time his main activities were those of leading the departments of Aerodynamics Performance and Preliminary Design at Fokker Aircraft Company The groundwork for this book started in 1987 as a series of lecture notes consisting mainly of pictorial material with a minimum of English explanatory text After the demise of Fokker in 1996 one feared that interest in aeronautical engineering would strongly diminish As a result of this the course was discontinued and the relationship between the author and the faculty came to an end Two years later the situation was reappraised and the interest in aeronautical engineering remained so the course was reinstated with a former Fokker colleague Ronald Slingerland as lecturer The lecture notes from these courses form the foundation of this publication *Aviation Maintenance Technician Handbook-Airframe* Federal Aviation Administration (FAA)/Aviation Supplies & Academics (ASA), 2012 This new FAA AMT Handbook Airframe Volume 1 is one of two volumes that replace and supersede Advisory Circular AC 65 15A Completely revised and updated this handbook reflects current operating procedures regulations and equipment This book was developed as part of a series of handbooks for persons preparing for mechanic certification with airframe or powerplant ratings or both those seeking an Aviation Maintenance Technician AMT Certificate also called an A P license An effective text for both students and instructors this handbook will also serve as an invaluable reference guide for current technicians who wish to improve their knowledge Airframe Volume 1 contains Aircraft Structures Aerodynamics Aircraft Assembly and Rigging Aircraft Fabric Covering Aircraft Metal Structural Repair Aircraft Welding Aircraft Wood and Structural Repair Advanced Composite Materials Aircraft Painting and Finishing Aircraft Electrical System Includes colored charts tables full color illustrations and photographs throughout and an extensive glossary and index *Autonomous Safety Control of Flight Vehicles* Xiang Yu, Lei Guo, Youmin Zhang, Jin Jiang, 2021-02-23 Aerospace vehicles are by their very nature a crucial environment for safety critical systems By virtue of an effective safety control system the aerospace vehicle can maintain high performance despite the risk of component malfunction and multiple disturbances thereby enhancing aircraft safety and the probability of success for a mission Autonomous Safety Control of Flight Vehicles presents a systematic methodology for improving the safety of aerospace vehicles in the face of the following occurrences a loss of control effectiveness of actuators and control surface impairments the disturbance of observer based control against multiple disturbances actuator faults and model uncertainties in hypersonic gliding vehicles and faults arising from actuator faults

and sensor faults Several fundamental issues related to safety are explicitly analyzed according to aerospace engineering system characteristics while focusing on these safety issues the safety control design problems of aircraft are studied and elaborated on in detail using systematic design methods The research results illustrate the superiority of the safety control approaches put forward The expected reader group for this book includes undergraduate and graduate students but also industry practitioners and researchers About the Authors Xiang Yu is a Professor with the School of Automation Science and Electrical Engineering Beihang University Beijing China His research interests include safety control of aerospace engineering systems guidance navigation and control of unmanned aerial vehicles Lei Guo appointed as Chang Jiang Scholar Chair Professor is a Professor with the School of Automation Science and Electrical Engineering Beihang University Beijing China His research interests include anti disturbance control and filtering stochastic control and fault detection with their applications to aerospace systems Youmin Zhang is a Professor in the Department of Mechanical Industrial and Aerospace Engineering Concordia University Montreal Qu bec Canada His research interests include fault diagnosis and fault tolerant control and cooperative guidance navigation and control GNC of unmanned aerial space ground surface vehicles Jin Jiang is a Professor in the Department of Electrical Computer Engineering Western University London Ontario Canada His research interests include fault tolerant control of safety critical systems advanced control of power plants containing non traditional energy resources and instrumentation and control for nuclear power plants

The Simple Physics of Energy Use Peter Rez, 2017-09-29 As a society we use energy for climate control and lighting in buildings moving people and goods from one place to another and making things Our standard of living depends on transforming energy locked up in fossil fuels atomic nuclei or provided free of charge by the sun and wind into a form that we can use This book uses simple classical physics mechanics thermodynamics and electromagnetism to quantitatively review sources of energy and how we use them It addresses key questions such as Can renewables such as solar and wind take over from fossil fuels How much will their use reduce CO2 emissions To see what is important numbers are used to estimate how big or small things are but the maths is kept at the level of simple algebra and trigonometry The aim is to give an overview of the big picture to only worry about what really makes a difference There is also growing concern that CO2 emissions from burning fossil fuels will change climate irreversibly in harmful ways
