Statistical concepts: what is a random sample? A random sample is a subset of the population. If you take a random sample, you are making a prediction about the population. The more samples you take, the more accurate your prediction will be. There is a trade-off between the size of the sample and the accuracy of the prediction. A larger sample will give you a more accurate prediction, but it will also cost more to collect the data. A smaller sample will be cheaper, but it will also be less accurate. The trade-off between accuracy and cost is a key concept in statistics.
