**New advances in the field of nerve regeneration** Hui Lu, Wenchuan Zhang, Shizhang Ling, Bo-Zong Shao, Olga Aleinikova, Xiaofeng Yang, 2025-02-17 Nerve regeneration refers to the regeneration or repair of nerve tissue cells or cell products. This mechanism may include the production of new neurons, glia, axons, myelin sheaths, or synapses. Nerve regeneration is clinically important because it is part of the pathogenesis of many diseases. Due to the high incidence of nerve damage, nerve regeneration and repair are becoming a rapidly developing field. The peripheral nervous system (PNS) and central nervous system (CNS) are involved in different functional mechanisms. The peripheral nervous system has the intrinsic ability to repair and regenerate, while the central nervous system largely lacks the ability to repair and regenerate itself. Theories about nervous system regeneration still need to be studied. Much research is still needed to optimize the environment to realize the regenerative potential of nerves.

**Hernia Repair Sequelae** Volker Schumpelick, Robert J. Fitzgibbons, 2010-03-10 Even the best hernia repair can result in postoperative difficulties for the patient caused by repair sequelae, as for example pain, infertility, infection, adhesion, and dislocation of the prostheses. That can happen many years later and now where the general principle of hernia repair is well understood all over the world, these sequelae are noticed more and more. To define them, to evaluate the absolute and relative risk of these sequelae, and to describe the ways of their prevention, diagnosis, and treatment, the 5th Suvretta meeting had focussed on this subject. We discussed if there is a principle risk by technique, material, or both. The results of these discussions and the future handling and evaluation of this problem was the aim of this meeting. Even the best method can be made better.

by optimization of its single components Even the best hernia repair can result in postoperative difficulties for the patient caused by repair sequelae such as pain infertility infection adhesion and dislocation of the prostheses This can happen many years later and now that the general principle of hernia repair is broadly understood all over the world these sequelae are being noticed more and more The 5th Suvretta meeting was held in order to define these sequelae to evaluate the absolute and relative risks they pose and to discuss the methods of their prevention diagnosis and treatment We discussed whether the principal risk was related to technique material or both This discussion and the future approach to and evaluation of this problem were the aims of the meeting working on the premise that even the best method can be made better by optimizing its individual components
