

Heat Shields (UL/CSA)

The exhaust shields must be properly installed to maintain compartment temperatures within the limits specified by the following regulations:

AMSA-PYRA-EGS-1-1976

UL Subject 1248

CSA Bulletin #946

Follow the disassembly and reassembly recommendations to avoid damage and ensure safe operation.

Disassembly: Remove the 1/4 inch locking head bolt that secures the top of the downpipe shield to the exhaust manifold shield. Remove the downpipe shield by pulling it upward and outward until the tab (see Figure 3) is disengaged from the clamp screw. Remove the three 1/4 inch locking head bolts that secure the exhaust manifold shield to the mounting brackets and scroll and lift off the manifold shield. The manifold shield mounting brackets and heat shield clamp may be left attached unless complete disassembly is required.

FIGURE 3. EXHAUST SHIELD TAB ENGAGEMENT

Assembly: Secure the exhaust manifold shield to the mounting brackets and scroll using three 1/4 inch locking head bolts. Install the downpipe shield by engaging the tab (on inside of shield) behind the clamp screw on the downpipe. The clamp screw must be positioned on the outside of the downpipe as shown in Figure 3.

CAUTION

Installing the downpipe shield clamp incorrectly will cause downpipe tab to break off due to vibration. Place tab behind clamp screw and not under clamp.

Secure the top of the shield by installing the top 1/4 inch locking bolt in the exhaust manifold shield. If the downpipe shield is loose, adjust the clamp higher up on the downpipe as shown in Figure 3 and tighten securely. Recheck and tighten any loose bolts.

WARNING

To prevent overheating of compartment walls and the possibility of fire, all exhaust shielding supplied with unit must be properly installed.

Exhaust Pipe And Muffler

The exhaust system consists of the exhaust manifold, exhaust downpipe, muffler, spark arrester, and tailpipe. Older models might have a separate spark arrester. However, on most models, the spark arrester will be integral with the muffler. When service is necessary, disassemble and reassemble as specified in the following sections.

Disassembly: Remove heat shields as described in the previous section and then proceed as indicated.

1. Loosen muffler clamp and support hanger clamp(s) and remove the muffler and tailpipe assembly (see Figure 2).
2. Loosen the exhaust downpipe flange bolts and remove the downpipe and asbestos flange gasket. Some models may have a clamp-connection instead of a flange.
3. Loosen the four exhaust manifold bolts and remove the exhaust manifold and two manifold gaskets.

Assembly: Obtain the required replacement parts and proceed as indicated.

1. Install the exhaust manifold using new gaskets. Tighten the four exhaust manifold screws to the specified torque.
2. Secure the exhaust downpipe to the exhaust manifold using 5/16-1/8 bolts, lock washers, and nuts. Use a new asbestos gasket between the exhaust manifold flanges to prevent leaks and tighten securely. Do not use sealer on the gasket.
3. Attach the inlet of the muffler to the downpipe using a 1-5/8 inch automotive type U-bolt clamp ONLY (see Figure 4) and tighten securely. If downpipe must be shortened, cut two 1/2 inch slots in the end of the downpipe after shortening.
4. If replacing the original tailpipe, refer to the following guidelines for selecting and locating the tailpipe.

WARNING

Inhalation of exhaust gases might result in severe personal injury or death. Exhaust gases might enter the coach interior if the tailpipe is damaged, missing, or improperly installed. Follow the recommended exhaust system replacement procedures to ensure safe operation.
