Julian Blau, 2008-09-10 Driven by the nation s growing thirst for energy Project Aurora takes shape in the pristine wilderness of northern Alaska The U S Department of Energy unveils plans to tap the enormous power of the solar wind using state of the art satellite technology combined with a recent discovery by an eminent atmospheric physicist As a multi billion dollar power station takes shape on the Arctic Circle oil interests and environmental groups plot to destroy it Project Director Alvin Brewer and his

team must not only overcome the technical challenges of harvesting energy from space but also must cope with sabotage from foreign terrorists. Unbeknownst to the director the military has its own plans for the Department of Energy's satellite network and unwittingly becomes party to the greatest manmade disaster ever to beset North America. Can Brewer and his team decode the software that sent their high energy satellite system out of control before our own military destroys the newborn product of years of research and engineering?

This work covers the design of CMOS fully integrated low power low phase noise voltage controlled oscillators for telecommunication or datacommunication systems. The need for low power is obvious as mobile wireless telecommunications are battery operated. As wireless telecommunication systems use oscillators in frequency synthesizers for frequency translation the selectivity and signal to noise ratio of receivers and transmitters depend heavily on the low phase noise performance of the implemented oscillators. Datacommunication systems need low jitter the time domain equivalent of low phase noise clocks for data detection and recovery. The power consumption is less critical. The need for multi band and multi mode systems pushes the high integration of telecommunication systems. This is offered by sub micron CMOS featuring digital exibility. The recent crisis in telecommunication clearly shows that mobile hand sets became mass market high volume consumer products where low cost is of prime importance. This need for low cost products livens tremendously research towards CMOS alternatives for the bipolar or BiCMOS solutions in use today.
