The difficulty lies in striking the right balance between providing a comprehensive overview of various review essay examples and offering insightful commentary. It demands a meticulous examination of each example, considering factors such as the clarity of the review's thesis, the depth of analysis, and the overall effectiveness of the critique.

Moreover, the writer must navigate through the diverse styles and tones of different reviews, ensuring a cohesive and well-structured essay. This involves not only summarizing each example but also synthesizing the information to present a coherent narrative that highlights the common threads and distinctions among them.

Furthermore, the process of crafting a review essay involves critical thinking and the ability to express opinions while maintaining objectivity. The writer must engage with the material thoughtfully, identifying strengths and weaknesses without falling into the trap of subjective bias.

Argumentation Mining

Manfred Stede, Jodi Schneider, 2022-06-01

Argumentation mining is an application of natural language processing NLP that emerged a few years ago and has recently enjoyed considerable popularity as demonstrated by a series of international workshops and by a rising number of publications at the major conferences and journals of the field Its goals are to identify argumentation in text or dialogue to construct representations of the constellation of claims supporting and attacking moves in different levels of detail and to characterize the patterns of reasoning that appear to license the argumentation

Furthermore recent work also addresses the difficult tasks of evaluating the persuasiveness and quality of arguments Some of the linguistic genres that are being studied include legal text student essays political discourse and debate newspaper editorials scientific writing and others The book starts with a discussion of the linguistic perspective characteristics of argumentative language and their relationship to certain other notions such as subjectivity Besides the connection to linguistics argumentation has for a long time been a topic in Artificial Intelligence where the focus is on devising adequate representations and reasoning formalisms that capture the properties of argumentative exchange It is generally very difficult to connect the two realms of reasoning and text analysis but we are convinced that it should be attempted in the long term and therefore we also touch upon some fundamentals of reasoning approaches Then the book turns to its focus the computational side of mining argumentation in text We first introduce a number of annotated corpora that have been used in the research From the NLP perspective argumentation mining shares subtasks with research fields such as subjectivity and sentiment analysis semantic relation extraction and discourse parsing Therefore many technical approaches are being borrowed from those and other fields We break argumentation mining into a series of subtasks starting with the preparatory steps of classifying text as argumentative or not and segmenting it into elementary units Then central steps are the automatic identification of claims and finding statements that support or oppose the claim For certain applications it is also of interest to compute a full structure of an argumentative constellation of statements Next we discuss a few steps that try to dig deeper to infer the underlying reasoning pattern for a textual argument to reconstruct unstated premises so called enthymemes and to evaluate the quality of the argumentation We also take a brief look at the other side of mining i e the generation or synthesis of argumentative text The book finishes with a summary of the argumentation mining tasks a sketch

of potential applications and a necessarily subjective outlook for the field **Fiske Guide to Colleges 2008** Edward B.
