teleological why is an architecture advantageous is the domain of substantial biomechanical research to date The second etiological how did an architecture come about has received far less attention This Frontiers Bone Research Topic invited contributions addressing this etiological why what mechanisms can coordinate the activity of bone forming and resorbing cells to produce the observed complex and efficient bone architectures One mechanism is proposed chaotic nonlinear pattern formation NPF which underlies in a unifying way natural structures as disparate as trabecular bone swarms of birds flying or shoaling fish island formation fluid turbulence and others At the heart of NPF is the fact that simple rules operating between interacting elements multiplied and repeated many times lead to complex and structured patterns This paradigm of growth and form leads to a profound link between bone regulation and its architecture in bone the architecture is the regulation The former is the emergent consequence of the latter Whatever mechanism does determine bone s developing architecture has to operate at the level of individual sites of formation and resorption and coupling between the two This has implications as to how we understand the effect on bone of agents such as gene products or drugs It may be for instance that the tuning of coupling between formation and resorption might be as important as the achievement of enhanced bone volume The ten articles that were contributed to this Topic were just what we hoped for a snapshot of leading edge bone biology research which addresses the question of how bone gets its shape We hope that you find these papers thought provoking and that they might stimulate new ideas in the research into bone architecture growth and adaptation and how to preserve healthy bone from gestation and childhood until old age **Tools and Algorithms for the Construction and Analysis of Systems** Dirk Beyer,Marieke Huisman,2018-04-11 This book is Open Access under a CC BY licence The LNCS 10805 and 10806 proceedings set constitutes the proceedings of the 24th International Conference on Tools and Algorithms for the Construction and Analysis of Systems TACAS 2018 which took place in Thessaloniki Greece in April 2018 held as part of the European Joint Conference on Theory and Practice of Software ETAPS 2018 The total of 43 full and 11 short papers presented in these volumes was carefully reviewed and selected from 154submissions The papers are organized in topical sections as follows Part I theorem proving SAT and SMT I deductive verification software verification and optimization model checking and machine learning Part II concurrent and distributed systems SAT and SMT II security and reactive systems static and dynamic program analysis hybrid and stochastic systems temporal logic and mu calculus 7th Competition on Software Verification SV COMP
