MATHEMATICS**Paper 01 – General Proficiency***1 hour 30 minutes***13 JANUARY 2024 (a.m.)****READ THE FOLLOWING INSTRUCTIONS CAREFULLY.**

1. This test consists of 60 items. You will have 1 hour and 30 minutes to answer them.
2. In addition to this test booklet, you should have an answer sheet.
3. A list of formulae is provided on page 2 of this booklet.
4. Each item in this test has four suggested answers lettered (A), (B), (C), (D). Read each item you are about to answer and decide which choice is best.
5. On your answer sheet, find the number which corresponds to your item and shade the space having the same letter as the answer you have chosen. Look at the sample item below.

Sample Item

$2a + 6a =$

- (A) $8a$
(B) $8a^2$
(C) $12a$
(D) $12a^2$

Sample Answer

The best answer to this item is “ $8a$ ”, so (A) has been shaded.

6. If you want to change your answer, erase it completely before you fill in your new choice.
7. When you are told to begin, turn the page and work as quickly and as carefully as you can. If you cannot answer an item, go on to the next one. You may return to that item later.
8. You may do any rough work in this booklet.
9. Calculators and mathematical tables are NOT allowed for this paper.
10. ALL diagrams in this booklet are NOT drawn to scale, unless otherwise stated.

DO NOT TURN THIS PAGE UNTIL YOU ARE TOLD TO DO SO.

Feminist Histories and Digital Media Paula Hamilton, Mary Spongberg, 2020-06-09 Addressing current trends in feminist historical and literary scholarship in relation to digital media this book looks at how the field has developed since the first feminist archival research projects were initiated over twenty

years ago The contributions to the book explore three key concerns projects which document the history of women s political activism the digitising of primary document archives by women and the impact of digitisation on historical research about women In addition the book sheds light on the way in which historians and literary scholars fuse digital sources with traditional forms such as books and journal articles to imagine different and ground breaking histories of women s experience With the field of feminist history and its relationship to the digital world in a dynamic position the contributions to this volume can be read as signposts for future research in the field posing questions for scholars and readers to explore in more detail This book was originally published as a special issue of Women s History Review

ICPMG2014 - Physical Modelling in Geotechnics Christophe Gaudin,David White,2019-01-08 The 8th International Conference on Physical Modelling in Geotechnics ICPMG2014 was organised by the Centre for Offshore Foundation Systems at the University of Western Australia under the auspices of the Technical Committee 104 for Physical Modelling in Geotechnics of the International Society of Soil Mechanics and Geotechnical Engineering This quadrennial conference is the traditional focal point for the physical modelling community of academics scientists and engineers to present and exchange the latest developments on a wide range of physical modelling aspects associated with geotechnical engineering These proceedings together with the seven previous proceedings dating from 1988 present an inestimable collection of the technical and scientific developments and breakthroughs established over the last 25 years These proceedings include 10 keynote lectures from scientific leaders within the physical modelling community and 160 peer reviewed papers from 26 countries They are organised in 14 themes presenting the latest developments in physical modelling technology modelling techniques and sensors through a wide range of soil structure interaction problems including shallow and deep foundations offshore geotechnics dams and embankments excavations and retaining structures and slope stability Fundamental aspects of earthquake engineering geohazards ground reinforcements and improvements and soil properties and behaviour are also covered demonstrating the increasing complexity of modelling arising from state of the art technological developments and increased understanding of similitude principles A special theme on education presents the latest developments in the use of physical modelling techniques for instructing undergraduate and postgraduate students in geotechnical engineering

Encyclopedia of Geology ,2020-12-16 Encyclopedia of Geology Second Edition presents in six volumes state of the art reviews on the various aspects of geologic research all of which have moved on considerably since the writing of the first edition New areas of discussion include extinctions origins of life plate tectonics and its influence on faunal provinces new types of mineral and hydrocarbon deposits new methods of dating rocks and geological processes Users will find this to be a fundamental resource for teachers and students of geology as well as researchers and non geology professionals seeking up to date reviews of geologic research Provides a comprehensive and accessible one stop shop for information on the subject of geology explaining methodologies and technical jargon used in the field Highlights connections between geology and other

physical and biological sciences tackling research problems that span multiple fields Fills a critical gap of information in a field that has seen significant progress in past years Presents an ideal reference for a wide range of scientists in earth and environmental areas of study Drawing Futures Bob Sheil,Frédéric Migayrou,Luke Pearson,Laura Allen,2016-11-11

Drawing Futures brings together international designers and artists for speculations in contemporary drawing for art and architecture Despite numerous developments in technological manufacture and computational design that provide new grounds for designers the act of drawing still plays a central role as a vehicle for speculation There is a rich and long history of drawing tied to innovations in technology as well as to revolutions in our philosophical understanding of the world In reflection of a society now underpinned by computational networks and interfaces allowing hitherto unprecedented views of the world the changing status of the drawing and its representation as a political act demands a platform for reflection and innovation Drawing Futures will present a compendium of projects writings and interviews that critically reassess the act of drawing and where its future may lie Drawing Futures focuses on the discussion of how the field of drawing may expand synchronously alongside technological and computational developments The book coincides with an international conference of the same name taking place at The Bartlett School of Architecture UCL in November 2016 Bringing together practitioners from many creative fields the book discusses how drawing is changing in relation to new technologies for the production and dissemination of ideas **The Routledge Companion to Entrepreneurship** Ted Baker,Friederike Welter,2014-09-15

Research in entrepreneurship has been booming with perspectives from a range of disciplines and numerous developing schools of thought It can be difficult for young scholars and even long time researchers to find their way through the lush garden of ideas we see before us The purpose of this book is to map the research terrain of entrepreneurship providing the perfect starting point for new and existing researchers looking to explore Topics covered range from emerging perspective through issues at the core of the field to innovative methodologies Starting off with a preface by Bill Gartner each section of the book brings together a world class set of established leading researchers and rising stars This considered comprehensive and conclusive companion integrates the recent debates in entrepreneurship research under one cover to provide a resource which will be useful across disciplinary boundaries and for a whole range of students and researchers *Neuromorphic*

Engineering Systems and Applications André van Schaik,Tobi Delbruck,Jennifer Hasler,2015-07-05 Neuromorphic engineering has just reached its 25th year as a discipline In the first two decades neuromorphic engineers focused on building models of sensors such as silicon cochleas and retinas and building blocks such as silicon neurons and synapses These designs have honed our skills in implementing sensors and neural networks in VLSI using analog and mixed mode circuits Over the last decade the address event representation has been used to interface devices and computers from different designers and even different groups This facility has been essential for our ability to combine sensors neural networks and actuators into neuromorphic systems More recently several big projects have emerged to build very large scale

neuromorphic systems The Telluride Neuromorphic Engineering Workshop since 1994 and the CapoCaccia Cognitive Neuromorphic Engineering Workshop since 2009 have been instrumental not only in creating a strongly connected research community but also in introducing different groups to each other's hardware Many neuromorphic systems are first created at one of these workshops With this special research topic we showcase the state of the art in neuromorphic systems **From Pen to Pixel** Patrizia Fortini, Krupali Krusche, 2021-01-31 Efforts to build, rebuild and maintain the Forum Romanum, Rome's historic urban epicenter, are likely as old as the place itself, some 2800 years. As a result, the historic significance and archaeological richness of the Forum cannot be overestimated. Despite its many changes, the Forum Romanum's survival today represents an outstanding example of cultural heritage continuity. Its highest possible protection status among monuments, conservation agencies in Italy, and its early listing on UNESCO's World Heritage List in 1980 are testaments to this. Due to its remarkable physical survival, the Forum Romanum has been the object of extensive research, documentation, restoration, and preservation efforts over the past two centuries, especially. The sophistication of these measures evolved to include a wide range of expertise. Lay interest among antiquarians and architects in Rome's past from the Renaissance through the eighteenth century was supplanted by the emerging new disciplines of archaeology, architectural restoration, and museology. From the late nineteenth century, corresponding advancements in archaeological method and conservation theory and science were increasingly applied. From this time on, as well, expectations for preserving and presenting the Forum Romanum were high, the famous site being a matter of intense Roman pride, political interest, and serving as a must-see destination for visitors to Rome. Leading historians, archaeologists, and conservators have been central to the story of the Forum's survival and interpretation. While numerous noted antiquarians and historians preceded him, the architect and archaeologist Giacomo Boni (1859-1925) was unusual, even prescient, in his approach and treatment of the place during his tenure as director of excavations of the Forum Romanum from 1898 until 1925. His combined talents as an architect, archaeologist, and conservator set a standard at the time for careful research, thorough documentation, and responsible conservation measures. The sponsors of the DHARMA conference have wisely chosen to focus on archaeological research and conservation in the Forum during Giacomo Boni's tenure, since his work reflects early best practices in researching, preserving, and interpreting such places. To frame the discussion, some precedents and influences of the work of Giacomo Boni are offered.

Control Engineering and Information Systems Zhijing Liu, 2015-01-19 Control Engineering and Information Systems contains the papers presented at the 2014 International Conference on Control Engineering and Information Systems (ICCEIS 2014), Yueyang, Hunan, China, 20-22 June 2014. All major aspects of the theory and applications of control engineering and information systems are addressed, including Intelligent Systems.

Oxytocin's routes in social behavior: into the 21st century.

“Precision Medicine” approach for Oxytocin Alaine Keebaugh,Elissar Andari,Lisa A. Parr,2015-12-21 Our brain is endowed with an incredible capacity to be social to trust to cooperate to be altruistic to feel empathy and love Nevertheless the biological underpinnings of such behaviors remain partially hardwired Seminal research in rodents has provided important insights on the identification of specific genes in modulating social behaviors in particular the arginine vasopressin receptor and the oxytocin receptor genes These genes are involved in regulating a wide range of social behaviors mother infant interactions social recognition aggression and socio sexual behavior Remarkably we now know that these genes contribute to social behavior in a broad range of species from voles to humans Indeed advances in human non invasive neuroimaging techniques and genetics have enabled scientists to begin to elucidate the neurobiological basis of the complexity of human social behaviors using pharmacological fMRI and imaging genetics Over the past few years there has been a strong interest focused on the role of oxytocin in modulating human social behaviors with translational relevance for understanding neuropsychiatric disorders such as autism schizophrenia and depression in which deficits in social perception and social recognition are key phenotypes The convergence of this interdisciplinary research is beginning to reveal the complex nature of oxytocin s actions For instance the way that oxytocin does influence social functioning is highly related to individual differences in social experiences but also to the inter individual variability in the receptor distribution of this molecule in the brain Remarkably despite the increasing evidence that oxytocin has a key role in regulating human social behavior we still lack of knowledge on the core mechanisms of action of this molecule Understanding its fundamental actions is a crucial need in order to target optimal therapeutic strategies for human social disorders The originality of this Research Topic stands on its translational focus on bridging the gap between fundamental knowledge acquired from oxytocin research in voles and monkeys and recent clinical investigations in humans For instance what are the key animal findings that can import further knowledge on the mechanisms of actions of this molecule in humans What are the key experiences that can be performed in the animal model in order to answer significant science gaps in the treatment of neuropsychiatric disorders Hence within this Research Topic we will review the current state of the field identify where the gaps in knowledge are and propose directions for future research This issue will begin with a comparative review that examines the role of this peptide in diverse animal models which highlights the adaptive value of oxytocin s function across multiple species Then a series of

reviews will examine the role of oxytocin in voles primates and humans with an eye toward revealing commonalities in the underlying brain circuits mediating oxytocin's effects on social behavior Next there will be a translational review highlighting the evidence for oxytocin's role in clinical applications in psychopathology Hence via the continuum of basic to translational research areas we will try to address the important gaps in our understanding of the neurobiological routes of social cognition and the mechanisms of action of the neuropeptides that guide our behaviors and decisions
