Versatile Video Coding Humberto Ochoa Dominguez, K.R. Rao, 2022-09-01 Video is the main driver of bandwidth use accounting for over 80 per cent of consumer Internet traffic Video compression is a critical component of many of the available multimedia applications it is necessary for storage or transmission of digital video over today's band limited networks The majority of this video is coded using international standards developed in collaboration with ITU-T Study Group and MPEG The MPEG family of video coding standards begun in the early 1990s with MPEG-1 developed for video and audio storage on CD-ROMs with support for

progressive video MPEG 2 was standardized in 1995 for applications of video on DVD standard and high definition television with support for interlaced and progressive video MPEG 4 part 2 also known as MPEG 2 video was standardized in 1999 for applications of low bit rate multimedia on mobile platforms and the Internet with the support of object based or content based coding by modeling the scene as background and foreground Since MPEG 1 the main video coding standards were based on the so called macroblocks However research groups continued the work beyond the traditional video coding architectures and found that macroblocks could limit the performance of the compression when using high resolution video Therefore in 2013 the high efficiency video coding HEVC also known as H 265 was released with a structure similar to H 264 AVC but using coding units with more flexible partitions than the traditional macroblocks HEVC has greater flexibility in prediction modes and transform block sizes also it has a more sophisticated interpolation and de blocking filters In 2006 the VC 1 was released VC 1 is a video codec implemented by Microsoft and the Microsoft Windows Media Video VMW 9 and standardized by the Society of Motion Picture and Television Engineers SMPTE In 2017 the Joint Video Experts Team JVET released a call for proposals for a new video coding standard initially called Beyond the HEVC Future Video Coding FVC or known as Versatile Video Coding VVC VVC is being built on top of HEVC for application on Standard Dynamic Range SDR High Dynamic Range HDR and 360 Video The VVC is planned to be finalized by 2020 This book presents the new VVC and updates on the HEVC The book discusses the advances in lossless coding and covers the topic of screen content coding Technical topics discussed include Beyond the High Efficiency Video Coding High Efficiency Video Coding encoder Screen content Lossless and visually lossless coding algorithms Fast coding algorithms Visual quality assessment Other screen content coding algorithms Overview of JPEG Series Proceedings, 2003 Machine Learning in Medical Imaging Fei Wang, Dinggang Shen, Pingkun Yan, Kenji Suzuki, 2012-11-13 This book constitutes the refereed proceedings of the Third International Workshop on Machine Learning in Medical Imaging MLMI 2012 held in conjunction with MICCAI 2012 in Nice France in October 2012 The 33 revised full papers presented were carefully reviewed and selected from 67 submissions The main aim of this workshop is to help advance the scientific research within the broad field of machine learning in medical imaging It focuses on major trends and challenges in this area and it presents work aimed to identify new cutting edge techniques and their use in medical imaging **Fuzzy Systems and Data Mining V** Antonio J.
