Control of Singular

Fractional Order Systems: LMI Approach Saliha Marir, Mohammed Chadli, 2025-07-06

This book provides a comprehensive study of singular fractional order systems presenting a novel perspective on their analysis and control. Using the Linear Matrix Inequalities approach, it provides conditions for admissibility, robust admissibility, stabilization, and robust stabilization of fractional singular linear time invariant systems. The methods discussed address key challenges in stability and robustness and provide innovative solutions to open problems in fractional order control theory. Aimed at control scientists, graduate students, and advanced undergraduates, this work bridges theoretical developments and practical applications, making it a valuable resource for understanding and advancing the field of fractional order systems. It is particularly suitable for those seeking new directions in control systems research or who wish to apply fractional tools to dynamic systems modeling and control. With its unique focus and broad scope, this book serves as an indispensable reference for courses such as Analysis and Control of Fractional Order Systems and LMI Based Control of Singular Fractional Order Systems.

The Next One Ken Reid, 2025-10-21

Behind the scenes to hockey's hidden superstars, the scouts who chase teenage prodigies and might never be across North America and around the world. If you attend any junior, minor, or professional hockey game and you'll spot them often up in the rafters alone busily taking notes and calling their general managers. These are the scouts, the men and women who have made the job into a lifestyle, chasing players across borders, working the locals, chatting with retired hockey people, and visiting remote communities in hopes of finding the next one. Yes, they scout the likes of Connor McDavid and Connor Bedard, and even Wayne Gretzky, but scouts really make their mark by finding players who will fit in up and down the lineup, the scorer having trouble finding the net, the goalie who stands on her head to keep her team in the game, the quiet winger who arrives at the rink first and leaves last. Scouts don't just bird-dog talent; they evaluate character and grit and drive, looking for players who can play even a handful of games in the bigs. Hockey's favourite raconteur, Ken Reid, tells us all about this secret club. One scout found himself squeezed into a small car with a bunch of other scouts, including Hall of Fame goalie Glenn Hall. Former NHLer and pro scout Rick Knickle followed Jordin Tootoo of remote Rankin Inlet, even though Tootoo didn't start playing the game until he was eleven years old. One scout worked at a maximum security prison only to find himself as a pro scout. Another scout went from a farmer who tried his hand at scouting to being a scout who happened to own a farm. And Reid takes us behind the scenes at the nascent P.W.H.L. where teams furiously scouted their starting lineups with only a few weeks before the season began. Always entertaining, often illuminating, and sometimes hilarious, *The Next One* is the ideal book for

Zeroing Neural Networks Lin Xiao,Lei Jia,2022-12-01 Zeroing Neural Networks Describes the theoretical and practical aspects of finite time ZNN methods for solving an array of computational problems Zeroing Neural Networks ZNN have become essential tools for solving discretized sensor driven time varying matrix problems in engineering control theory and on chip applications for robots Building on the original ZNN model finite time zeroing neural networks FTZNN enable efficient accurate and predictive real time computations Setting up discretized FTZNN algorithms for different time varying matrix problems requires distinct steps Zeroing Neural Networks provides in depth information on the finite time

convergence of ZNN models in solving computational problems Divided into eight parts this comprehensive resource covers modeling methods theoretical analysis computer simulations nonlinear activation functions and more Each part focuses on a specific type of time varying computational problem such as the application of FTZNN to the Lyapunov equation linear matrix equation and matrix inversion Throughout the book tables explain the performance of different models while numerous illustrative examples clarify the advantages of each FTZNN method In addition the book Describes how to design analyze and apply FTZNN models for solving computational problems Presents multiple FTZNN models for solving time varying computational problems Details the noise tolerance of FTZNN models to maximize the adaptability of FTZNN models to complex environments Includes an introduction problem description design scheme theoretical analysis illustrative verification application and summary in every chapter Zeroing Neural Networks Finite time Convergence Design Analysis and Applications is an essential resource for scientists researchers academic lecturers and postgraduates in the field as well as a valuable reference for engineers and other practitioners working in neurocomputing and intelligent control

Foundations of Algebraic Specification and Formal Software Development Donald Sannella, Andrzej

Tarlecki, 2012-01-05 This book provides foundations for software specification and formal software development from the perspective of work on algebraic specification concentrating on developing basic concepts and studying their fundamental properties These foundations are built on a solid mathematical basis using elements of universal algebra category theory and logic and this mathematical toolbox provides a convenient language for precisely formulating the concepts involved in software specification and development Once formally defined these notions become subject to mathematical investigation and this interplay between mathematics and software engineering yields results that are mathematically interesting conceptually revealing and practically useful The theory presented by the authors has its origins in work on algebraic specifications that started in the early 1970s and their treatment is comprehensive This book contains five kinds of material the requisite mathematical foundations traditional algebraic specifications elements of the theory of institutions formal specification and development and proof methods While the book is self contained mathematical maturity and familiarity with the problems of software engineering is required and in the examples that directly relate to programming the authors assume acquaintance with the concepts of functional programming The book will be of value to researchers and advanced graduate students in the areas of programming and theoretical computer science

Engineering of Embedded Real-Time Systems Holger Giese, Gabor Karsai, Edward A. Lee, Bernhard Rumpe, Bernhard Schätz, 2010-10-06 The topic of Model Based Engineering of Real Time Embedded Systems brings together a challenging problem domain real time embedded systems and a solution domain model based engineering. It is also at the forefront of integrated software and systems engineering as software in this problem domain is an essential tool for system implementation and integration. Today real time embedded software plays a crucial role in most advanced technical systems such as airplanes, mobile phones and cars and has become the main driver and catalyst for innovation. Development, evolution, verification, configuration and maintenance of embedded and distributed software nowadays are often serious challenges as drastic increases in complexity can be observed in practice. Model based engineering in general and model based software development in particular advocates the notion of using models throughout the development and life cycle of an engineered system. Model based software engineering reinforces this notion by promoting models not only as the tool of abstraction but also as the tool for verification, implementation, testing and maintenance. The application of such model based engineering techniques to embedded real time systems appears to be a good candidate to tackle some of the problems arising in the problem domain.
