

Chapter 1

Chapter 1 Project Worksheet 1 (p. 6)

Students' data tables and graphs will vary somewhat. In general, eggs will increase in size when they soak in vinegar and plain water, and they will decrease in size when they soak in liquids that have a lower concentration of water, such as salt water.

Chapter 1 Project Worksheet 2 (p. 7)

Column 4 in the table should read: 70 percent (liquid A); 92 percent (liquid B); 87 percent (liquid C); 79 percent (liquid D)

1. Liquids A and D would cause the cell to lose water; liquids B and C would cause the cell to take in water.
2. Possible answers might include shampoo, syrup, ketchup, or honey.

Section 1-1 Review and Reinforce (p. 11)

1. Hooke
2. First person to observe bacteria
3. Schleiden

6. Magnification and resolution are both important properties of a microscope. Magnification is the ability to increase how large an object appears, whereas resolution is the ability to bring the details of the object into focus.
7. An electron microscope uses electrons instead of light to magnify an object, and it can view an object with much greater magnification and resolution than a light microscope.
8. Cells are the basic unit of structure and function in living things, and all living things are composed of cells.
9. b
10. e
11. d
12. c
13. a
14. g
15. f

Section 1-1 Enrich (p. 12)

1. Transmission electron microscopes (TEM) and transmission positron microscopes (TPM) both use beams of atomic particles to view specimens. However, the TPM uses beams of positrons, which do not harm living things, whereas the TEM uses beams of electrons, which living things cannot withstand. Therefore, unlike the TEM, the TPM can be used to view living specimens.
2. Acoustic microscopes bounce high-frequency sound waves off an object. The echoes of the sound waves are then translated onto a screen as a microscopic image.
3. Transmission positron microscopes and acoustic microscopes can be used to view cells that are still alive and functioning. Electron microscopes, on the other hand, can be used to view only cells that are no longer alive.

controversy in the social and behavioral sciences How much of human behavior and development can be attributed to biology and how much to the environment Can either be said to determine human development And what are the implications of each view for society In this important study a noted developmental psychologist contributes to this debate by confronting the difficult issue of doctrines of human development and the consequences for society of deriving political programs and public policy from them Beginning with the premise that scientific ideas are not neutral but can be used for either good or evil Richard Lerner considers the recent history of one such idea biological determinism which at times has had the backing of respected scientists intellectuals and political leaders During this century biological determinism has been coupled with political philosophies that hold that some people are inherently better than others This has meant that certain groups of people Jews Blacks Native Americans women have been stigmatized because of supposedly innate even biological differences with sometimes disastrous consequences The most notorious instance was Nazi Germany where racial science given legitimacy by the scientific community became a cornerstone of the Nazi Final Solution Meanwhile theories of biological determinism continue to find adherents within the scientific community Konrad Lorenz who was awarded a Nobel Prize in 1973 was a critical figure in the development of the most recent manifestation of biological determinism sociobiology Lerner examines the work of Lorenz and current sociobiologists and the implications of their claims for modern society He fears that biological determinism may again be co opted to serve the political agenda of today s reactionary politicians In fact Lerner notes sociobiologists have had to face the fact that organizations such as the fascist National Front party in Britain and its counterparts in France and the United States have selectively seized upon sociobiology to fuel their notions of genetically superior and inferior races
