Newton's Apple and Other Myths about Science Ronald L. Numbers, Kostas Kampourakis, 2015-11-04 A falling apple inspired the law of gravity or so the story goes Is it true Perhaps not But why do such stories endure as explanations of how science happens Newton's Apple and Other Myths about Science brushes away popular misconceptions to provide a clearer picture of scientific breakthroughs from ancient times to the present

Making a Difference: Volume I and II Sasha A. Barab, Kenneth E. Hay, Nancy Butler Songer, Daniel T. Hickey, 2017-09-05 William Wordsworth 1770-1850 needs little introduction as the central figure in Romantic poetry and a crucial influence in the development of poetry generally This broad ranging survey redefines the variety of his writing by showing how it incorporates contemporary concepts of language difference and the ways in which popular and serious literature were compared and distinguished during this period It discusses many of Wordsworth's later poems comparing his work with that of his regional contemporaries as well as major writers such as Scott The key theme of relationship both between characters within poems and between poet and reader is explored through Wordsworth's construction of community and his use of power relationships A serious discussion of the place of sexual feeling in his writing is also included

Thinking in Physics Laurence Viennot,2014-03-18 Read this book if you care about students really understanding physics and getting genuine intellectual satisfaction from doing so Read it too if you fear that this goal is out of reach you may be surprised Laurence Viennot here shows ways to deal with the awkward fact that common sense thinking is often not the same as scientific thinking She analyses examples of frequent and widespread errors and confusions which provide a real eye opener for the teacher More than that she shows ways to avoid and overcome them The book argues against over emphasis on fun applications demonstrating that students also enjoy and value clear thinking The book has three parts making sense of special scientific ways of reasoning words images functions making connections between very different topics each illuminating the other simplifying looking for consistency and avoiding incoherent over simplification The book is enhanced with supplementary online materials that will allow readers to further expand their teaching or research interests and think about them more deeply

Quantum Mechanics K. Kong Wan,2019-07-09 The mathematical formalism of quantum theory in terms of vectors and operators in infinite dimensional complex vector spaces is very abstract The definitions of many mathematical quantities used do not seem to have an intuitive meaning which makes it difficult to appreciate the mathematical formalism and understand quantum mechanics This book provides intuition and motivation to the mathematics of quantum theory introducing the mathematics in its simplest and familiar form for instance with three dimensional vectors and operators which can be readily understood Feeling confident about and comfortable with the mathematics used helps readers appreciate and understand the concepts and formalism of quantum mechanics This book is divided into four parts Part I is a brief review of the general properties of classical and quantum systems A general discussion of probability theory is also included which aims to help in understanding the probability theories relevant to quantum mechanics Part II is a detailed study of the mathematics for quantum mechanics Part III presents quantum mechanics in a series of postulates Six groups of postulates are presented to describe orthodox quantum systems Each statement of a postulate is supplemented with a detailed discussion To make them easier to understand the postulates for discrete observables are presented before those for continuous observables Part IV presents

several illustrative applications which include harmonic and isotropic oscillators charged particle in external magnetic fields and the Aharonov Bohm effect For easy reference definitions theorems examples comments properties and results are labelled with section numbers Various symbols and notations are adopted to distinguish different quantities explicitly and to avoid misrepresentation Self contained both mathematically and physically the book is accessible to a wide readership including astrophysicists mathematicians and philosophers of science who are interested in the foundations of quantum mechanics

Subject Guide to Books in Print ,1991 **Wonder** Frank C. Keil,2022-03-01 How we can all be lifelong wonderers restoring the sense of joy in discovery we felt as children From an early age children pepper adults with questions that ask why and how Why do balloons float How do plants grow from seeds Why do birds have feathers Young children have a powerful drive to learn about their world wanting to know not just what something is but also how it got to be that way and how it works Most adults on the other hand have little curiosity about whys and hows we might unlock a door for example or boil an egg with no idea of what happens to make such a thing possible How can grown ups recapture a child s sense of wonder at the world In this book Frank Keil describes the cognitive dispositions that set children on their paths of discovery and explains how we can all become lifelong wonderers Keil describes recent research on children s minds that reveals an extraordinary set of emerging abilities that underpin their joy of discovery their need to learn not just the facts but the underlying causal patterns at the very heart of science This glorious sense of wonder however is stifled beginning in elementary school Later with little interest in causal mechanisms and motivated by intellectual blind spots as adults we become vulnerable to misinformation and manipulation ready to believe things that aren t true Of course the polymaths among us have retained their sense of wonder and Keil explains the habits of mind and ways of wondering that allow them and can enable us to experience the joy of asking why and how

American Book Publishing Record ,2002 *Conceptual Structures for Knowledge Creation and Communication* Aldo de Moor,Wilfried Lex,Bernhard Ganter,2003-09-09 This volume contains the proceedings of ICCS 2003 the 11th International Conference on Conceptual Structures

This conference series continues to be the main forum for the presentation and discussion of state of the art research on conceptual structures. The theories, methodologies and techniques presented here have grown considerably in scope in recent years. On the other hand, solid bridges spanning the boundaries between such diverse fields as Conceptual Graphs, Formal Concept Analysis and others are increasingly being built in our community. The theme of this year's conference was Conceptual Structures for Knowledge Creation and Communication. In our increasingly interconnected world, the potential support of information technology for the creation and communication of quality knowledge is almost boundless. However, in reality, many conceptual barriers prevent the use of this potential. The main problem is no longer in the technological infrastructure but in how to navigate, use and manage the wealth of available data resources. Thus, the question is how to create and communicate from data the information and ultimately the knowledge required by an ever more complex and dynamic society. Conceptual structures research focuses on what is behind and between the data glut and the information overload that need to be overcome in answering this question. In this way, our field contributes important ideas on how to actually realize some of the many still ambitious visions. All regular papers were reviewed in a thorough and open process by at least two reviewers and one editor.

2004 Physics Education Research Conference Jeffrey Marx, Paula Heron, Scott Franklin, 2005-09-29. The 2004 Physics Education Research (PER) Conference brought together researchers in how we teach physics and how it is learned. Student understanding of concepts, the efficacy of different pedagogical techniques and the importance of student attitudes toward physics and knowledge were all discussed. These Proceedings capture an important snapshot of the PER community containing an incredibly broad collection of research papers of work in progress.

Modeling Time in Computing Carlo A. Furia, Dino Mandrioli, Angelo Morzenti, Matteo Rossi, 2012-10-19. Models that include a notion of time are ubiquitous in disciplines such as the natural sciences, engineering, philosophy and linguistics, but in computing the abstractions provided by the traditional models are problematic and the discipline has spawned many novel models. This book is a systematic, thorough presentation of the results of several decades of research on developing, analyzing and applying time models to computing and engineering. After an opening motivation introducing the topics, structure and goals, the authors introduce the notions of formalism and model in general terms along with some of their fundamental classification criteria. In doing so, they present the fundamentals of propositional and predicate logic and essential issues that arise when modeling time across all types of system. Part I is a summary of the models that are traditional in engineering and the natural sciences, including fundamental computer science, dynamical systems and control theory, hardware design and software algorithmic and complexity analysis. Part II covers advanced and specialized formalisms dealing with time modeling in heterogeneous, software-intensive systems, formalisms that share finite state machines as common ancestors: Petri nets in many variants, notations based on mathematical logic such as temporal logic, process algebras and dual language approaches combining two notations with different characteristics to model and verify complex systems, e.g. model checking frameworks. Finally, the book concludes

with summarizing remarks and hints towards future developments and open challenges The presentation uses a rigorous yet not overly technical style appropriate for readers with heterogeneous backgrounds and each chapter is supplemented with detailed bibliographic remarks and carefully chosen exercises of varying difficulty and scope The book is aimed at graduate students and researchers in computer science while researchers and practitioners in other scientific and engineering disciplines interested in time modeling with a computational flavor will also find the book of value and the comparative and conceptual approach makes this a valuable introduction for non experts The authors assume a basic knowledge of calculus probability theory algorithms and programming while a more advanced knowledge of automata formal languages and mathematical logic is useful

Knowledge and Interaction Andrea A. diSessa, Mariana Levin, Nathaniel J.S. Brown, 2015-12-07 Decades of research in the cognitive and learning sciences have led to a growing recognition of the incredibly multi faceted nature of human knowing and learning Up to now this multifaceted nature has been visible mostly in distinct and often competing communities of researchers From a purely scientific perspective siloed science where different traditions refuse to speak with one another or merely ignore one another is unacceptable This ambitious volume attempts to kick start a serious new line of work that merges or properly articulates different traditions with their divergent historical theoretical and methodological commitments that nonetheless both focus on the highly detailed analysis of processes of knowing and learning as they unfold in interactional contexts in real time Knowledge and Interaction puts two traditions in dialogue with one another Knowledge Analysis KA which draws on intellectual roots in developmental psychology and cognitive modeling and focuses on the nature and form of individual knowledge systems and Interaction Analysis IA which has been prominent in approaches that seek to understand and explain learning as a sequence of real time moves by individuals as they interact with interlocutors learning environments and the world around them The volume s four part organization opens up space for both substantive contributions on areas of conceptual and empirical work as well as opportunities for reflection integration and coordination
