*The Big Book of Real Analysis* Syafiq Johar, 2024-01-04 This book provides an introduction to real analysis a fundamental topic that is an essential requirement in the study of mathematics It deals with the concepts of infinity and limits which are the cornerstones in the development of calculus Beginning with some basic proof techniques and the notions of sets and functions the book rigorously constructs the real numbers and their related structures from the natural numbers During this construction the readers will encounter the notions of infinity limits real sequences and real series These concepts are then formalised and focused on as stand alone objects Finally they are expanded to limits sequences and series of more general objects such as real valued functions Once the fundamental tools of the trade have been established the readers are led into the classical study of calculus continuity differentiation and Riemann integration from first principles The book concludes with an introduction to the study of measures and how one can construct the Lebesgue integral as an extension of the Riemann integral This textbook is aimed at undergraduate students in mathematics As its title suggests it covers a large amount of material which can be taught in around three semesters Many remarks and examples help to motivate and provide intuition for the abstract theoretical concepts discussed In addition more than 600 exercises are included in the book some of which will lead the readers to more advanced topics and could be suitable for independent study projects Since the book is fully self contained it is also ideal for self study      Vision Geometry Robert A. Melter, Azriel Rosenfeld, Prabir

Bhattacharya, 1991 Since its genesis more than thirty five years ago the field of computer vision has been known by various names including pattern recognitions image analysis and image understanding The central problem of computer vision is obtaining descriptive information by computer analysis of images of a scene Together with the related fields of image processing and computer graphics it has become an established discipline at the interface between computer science and

electrical engineering This volume contains fourteen papers presented at the AMS Special Session on Geometry Related to Computer Vision held in Hoboken New Jersey in October 1989 This book makes the results presented at the Special Session which previously had been available only in the computer science literature more widely available within the mathematical sciences community Geometry plays a major role in computer vision since scene descriptions always involve geometrical properties of and relations among the objects of surfaces in the scene The papers in this book provide a good sampling of geometric problems connected with computer vision They deal with digital lines and curves polygons shape decompositions digital connectedness and surfaces digital metrics and generalizations to higher dimensional and graph structured spaces Aimed at computer scientists specializing in image processing computer vision and pattern recognition as well as mathematicians interested in applications to computer science this book will provide readers with a view of how geometry is currently being applied to problems in computer vision
