The beginning of life on land and many of the subsequent adaptations of plants, fungi and animals allowed aquatic organisms to survive and reproduce on land. During Late Ordovician, massive glaciers formed causing shallow seas to drain and sea levels to drop, possibly causing the mass extinctions that characterize the end of the Ordovician, in which 60% of all marine invertebrate genera and 25% of all families went extinct.	 
	485		Upper		 
		CAMBRIAN <i>Age of Trilobites</i>	Lower	The Cambrian Period is the time when most of the major groups of animals first appear in the fossil record. Called the "Cambrian Explosion" because of the short time in which this diversity appeared. Trilobites were the dominant form of hard part invertebrates. Cambrian animals were developing new ecological niches and strategies — like active hunting, burrowing deeply into sediment, and making complex branching burrows. Mineralized red and green algae also appeared.
