students given that these foundational concepts and skills intersect cross disciplinarily with a set of mental competencies that are relevant in their daily lives and work While many agree that these concepts should be taught in schools there are systematic inequities that exist to prevent students from accessing related computer science skills The Handbook of Research on Equity in Computer Science in P 16 Education is a comprehensive reference book that highlights relevant issues perspectives and challenges in P 16 environments that relate to the inequities that students face in accessing computer science or computational thinking and examines methods for challenging these inequities in hopes of allowing all students equal opportunities for learning these skills Additionally it explores the challenges and policies that are created to limit access and thus reinforce systems of power and privilege The chapters highlight issues perspectives and challenges faced in P 16 environments that include gender and racial imbalances population of growing computer science teachers who are predominantly white and male teacher preparation or lack of faculty expertise professional development programs and more It is intended for teacher educators K 12 teachers high school counselors college faculty in the computer science department school administrators curriculum and instructional designers directors of teaching and learning centers policymakers researchers and students *Intelligent Educational Robots* Stamatios Papadakis,Georgios Lampropoulos,2024-12-16 This book focuses on recent advances in maker education and in human robot interaction and on the integration of intelligent educational robots IER in P 12 education It covers various topics and trends about the evolution of maker education and the use of IER and artificial intelligence AI in P 12 education This book offers an overview of recent research into the adoption integration advancements and impact of IER and AI in education It helps researchers practitioners professionals and academicians of various scientific disciplines explore and better comprehend the state of the art of maker education AI and IER their advancements impact and future potentials in education Smart Learning with Educational Robotics Linda Daniela,2019-06-28 This book will offer ideas on how robots can be used as teachers assistants to scaffold learning outcomes where the robot is a learning agent in self directed learning who can contribute to the development of key competences for today s world through targeted learning such as engineering thinking math physics computational thinking etc starting from pre school and continuing to a higher education level Robotization is speeding up at the moment in a variety of dimensions both through the automation of work by performing intellectual duties and by providing support for people in everyday situations There is increasing political attention especially in Europe on educational systems not being able to keep up with such emerging technologies and efforts to rectify this This edited volume responds to this attention and seeks to explore which pedagogical and educational concepts should be included in the learning process so that the use of robots is meaningful from the pointof view of knowledge construction and so that it is safe from the technological and cybersecurity perspective **Advances in Robot Kinematics 2024** Jadran Lenarčič,Manfred Husty,2024-07-02 This book is aimed at researchers specializing in the kinematics of robot mechanisms as well as at doctoral students in guiding their research work

A spectrum of the latest achievements in kinematics analysis modelling simulation design and control is covered. New theories and methods are applied to serial parallel and cable driven mechanisms for use in industrial or service robotics. The systems range from being less than fully mobile to kinematically redundant and over constrained. Forty nine papers are included arranged in seven chapters as presented at the 19th Symposium on Advances in Robot Kinematics 2024. The symposium which has been held since 1988 was organized this time in Ljubljana Slovenia where it began thirty six years ago. The papers have been rigorously selected based on peer review and are arranged in chapters randomly as is the prevailing tradition of these symposia. In doing so we aim to give equal emphasis to each of these achievements.

Robotics Research Raymond Austin Jarvis, Alex Zelinsky, 2003-03-12 At the dawn of the new millennium robotics is undergoing a major transformation in scope and dimension. From a largely dominant industrial focus robotics is rapidly expanding into the challenges of unstructured environments. Interacting with assisting serving and exploring with humans the emerging robots will increasingly touch people and their lives. The goal of this new series of Springer Tracts in Advanced Robotics is to bring in a timely fashion the latest advances and developments in robotics on the basis of their significance and quality. It is our hope that the greater dissemination of research developments will stimulate more exchanges and collaborations among the research community and contribute to

further advancement of this rapidly growing field. As one of robotics' pioneering symposia, ISRR, the International Symposium on Robotics Research, has established over the past two decades some of the field's most fundamental and lasting contributions. With the launching of STAR, this and other thematic symposia devoted to excellence in robotics find an important platform for closer links and extended reach within the research community. The Tenth edition of Robotics Research, edited by Raymond Jarvis and Alex Zelinsky, offers in its 11 parts a volume, a collection of a broad range of topics in robotics. The content of these contributions provides a wide coverage of the current state of robotics research, the advances and challenges in its theoretical foundation and technology basis, and the developments in its traditional and new areas of applications.
