Action Research From Concept to Presentation: A Practical Handbook to Writing Your Master's Thesis Peter K. Lynch EdD, Ryan C. Welch, MS, 2014-07-03 Perhaps the most daunting graduate school requirement is the development of an action research Master's thesis. This capstone task requires unprecedented amounts of time, energy, and verbiage. Designed to take stress out of the thesis writing equation, this student-friendly comprehensive handbook glides the reader through a 28-step process from developing a focal topic to defending a scholarly thesis. Framing each chapter as a one-week action assignment, the authors have broken down the process into manageable chunks to enable students/writers to achieve an immediate sense of completion at every step. By using this scaffolding approach, the authors encourage the student researcher to focus on one part of the process rather than the total, sometimes overwhelming final product. With the exception of the Review of the Literature section, which takes several weeks to complete, all other thesis sections can and should be timed out for seven days. The authors' primary objective was to empower the student researcher to accomplish each of the steps in the process while never losing sight of the product that will help the children in their classrooms. Whether developing an Abstract or writing in-text citations, student researchers are guided throughout the nuances of the Publication Manual of the American Psychological Association's 6th Edition.

The Oxford Handbook of the Sociology of Body and Embodiment Natalie Boero, Katherine Mason, 2020-11-02 In popular debates over the influences of nature versus culture on human lives, bodies are often assigned to the category of nature, biological, essential, and pre-social. The Oxford Handbook of the Sociology of Body and Embodiment challenges that view, arguing that bodies both shape and get shaped by human societies. As such, the body is an appropriate and necessary area of study for sociologists. The Handbook works to clarify the scope of this topic and display the innovations of research within the field. The volume is divided into three main parts: Bodies and Methodology, Marginalized Bodies, and Embodied Sociology. Sociologists contributing to the first two parts focus on the body and the ways it is given meaning, regulated, and subjected to legal and medical oversight in a variety of social contexts, particularly when the body in question violates norms for how a culture believes bodies ought to behave or appear. Sociologists contributing to the last part use the body as a lens through which to study social institutions and experiences. These social settings range from personal decisions about medical treatment to programs for teaching police recruits how to use physical force, from social movement tactics to countries' understandings of race and national identity. The Oxford Handbook of the Sociology of the Body also prioritizes empirical evidence and methodological rigor, attending to the ways particular lives are lived in particular physical bodies located within particular cultural and institutional contexts. Many chapters offer extended methodological reflections providing guidance on how to conduct sociological research on the body and, at times, acknowledging the role the authors' own bodies play in developing their knowledge of the research subject.

The contributions in this monograph include 2 review articles and 19 original contributions from several countries that provide new information on the existing research elucidating important aspects of children's and adolescents' nutrition and lifestyle behavior. The data included in this Special Issue are from large epidemiological studies including several multicenter and multinational studies as well as datasets from surveillance initiatives. The topics of interest of this Special Issue include the co-occurrence of multiple health behaviors in children, the role of parenting and early feeding practices, dairy consumption in childhood, validity of dietary intake data, dietary supplement use in children, as well as socioeconomic disparities and eating culture. The diverse articles in this Special Issue highlight the complexity and extent to which nutrition and physical activity behaviors may influence different health aspects of children and adolescents. As seen by the various findings and recommendations, not only is more work in this area required, but the translation of this work to practice and policy is imperative if we are to address the challenges impacting the nutrition, physical activity, and health of young populations.
