BASIC PLANTING UNIT

General operating instructions

The Holland Transplanter is designed to give years of trouble-free planting with very low maintenance costs. To keep the planter running smoothly we suggest you follow this program.

1. Grease daily to flush out foreign material that causes abnormal wear.

Grease fittings are found at the following locations:

- 1 — Each packing wheel
- 1 — Each unit upright bearing for drive shaft
- 1 — Upper conveyor rollers
- 1 — Rocker arm assembly of water valve
- 1 — Each wheel hub of driven transplanter with roller bearing wheel hubs
- 1 — Each wheel hub of transplanters with depth control gauge wheels
- 1 — Each hub of counter blade if so equipped
- 7 — On fertilizer attachment if so equipped

2. Trip water valve by hand to determine if it is working properly.

3. REGULATING PLANT SETTING DEPTH

Care should be taken that plants are properly placed in the pockets, so the plant is held firmly and does not fall out when traveling between the pocket guides. The depth for setting plants can be regulated by the distance the foot extends out of the pocket. However, for plants with extremely long roots, the furrow opening shoe should be lowered to assure adequate depth as explained in the following paragraph.

4. Shoe can be adjusted up or down, as well as forward and backward. When most plants are being planted, it is recommended that the shoe be raised. With large plants the shoe should be lowered. In dry, loose soil, position the shoe back toward the packing wheels. In heavy, wet soil the shoe should be moved ahead, away from the packing wheels. After adjusting shoe, be sure it is in the center of the opening between packing wheels so the pocket will travel through middle of shoe.

Be sure the furrow opening shoe is clean. If soil "builds up" on outside of shoe, scrape off with putty knife at end of planting row. Also, remove any trash that may have accumulated on front of shoe. If either of these conditions exists, the shoe will make a wider furrow than needed and the packing wheels can not bring all the soil back around the plants to be properly packed.

5. With the planter unit in the raised position, turn the packing wheels by hand. Turn both wheels together; they should turn easily. If any sticking or binding occurs, check unit over.

6. **DO NOT RUN TRANSPLANTER BACKWARD.** This can cause damage to pockets and plug up head of shoe with soil.

7. **STORING TRANSPLANTER:** (a) Be sure the water valve is cleaned thoroughly, especially if starter solution has been used in planting. (b) Remove the rubber gaskets from the plant pockets and store indoors in an open position for longer life. (c) When done planting for season, hose off machine, scrape soil off shoe, grease outside of shoe and spray unit with light oil to prevent rust from starting.
