On The Surface:

On the Surface of Things Felice Frankel, G. M. Whitesides, 2007 Using innovative photographic technology Felice Frankel finds startling abstract beauty on the surfaces of objects all around us Chemist George M Whitesides explains each photograph describing why and how each of these phenomena occur *The Surface of Mars* Michael H. Carr, 2007-01-11 Our knowledge of Mars has grown enormously over the last decade as a result of the Mars Global Surveyor Mars Odyssey Mars Express and the two Mars Rover missions This book is a systematic summary of what we have learnt about the geological evolution of Mars as a result of these missions It describes the diverse Martian surface features and summarizes current ideas as to how when and under what conditions they formed and explores how Earth and Mars differ and why the two planets evolved so differently The author also discusses possible implications of the geologic history for the origin and survival of indigenous Martian life Up to date and highly illustrated this book will be a principal reference for researchers and graduate students in planetary science The comprehensive list of references will also assist readers in pursuing further information on the subject Colour images can be found at www.cambridge.org 9780521872010 *A Discourse on the Revolutions of the Surface of the Globe, and the Changes Thereby Produced in the Animal Kingdom* Georges baron Cuvier, 1831 *The Surface of Things* Prita Meier, 2024-10-15 The first history of photography from Africa s Swahili coast revealing the images complicated relationships to colonialism and global influence *The Effect of Surface-active Agents on the Mechanical Properties of Metals* I. R. Kramer, 1961 *Birational Geometry, Kähler-Einstein Metrics and Degenerations* Ivan Cheltsov, Xiuxiong Chen, Ludmil Katzarkov, Jihun Park, 2023-05-23 This book collects the proceedings of a series of conferences dedicated to birational geometry of Fano varieties held in Moscow Shanghai and Pohang The conferences were focused on the following two related problems existence of Kähler Einstein metrics on Fano varieties degenerations of Fano varieties on which two famous conjectures were recently proved The first is the famous Borisov Alexeev Borisov Conjecture on the boundedness of Fano varieties proved by Caucher Birkar for which he was awarded the Fields medal in 2018 and the second one is the arguably even more famous Tian Yau Donaldson Conjecture on the existence of Kähler Einstein metrics on smooth Fano varieties and K stability which was proved by Xiuxiong Chen Sir Simon Donaldson and Song Sun The solutions for these longstanding conjectures have opened new directions in birational and Kähler geometries These research directions generated new interesting mathematical problems attracting the attention of mathematicians worldwide These conferences brought together top researchers in both fields birational geometry and complex geometry to solve some of these problems and understand the relations between them The result of this activity is collected in this book which contains contributions by sixty nine mathematicians who contributed forty three research and survey papers to this volume Many of them were participants of the Moscow Shanghai Pohang conferences while the others helped to expand the research breadth of the volume the diversity of their contributions reflects the vitality of modern Algebraic Geometry **Characterization of**

Corrosion Products on Steel Surfaces Yoshio Waseda, Shigeru Suzuki, 2006-10-06 This book describes the fundamental aspects of materials characterization for the ferric oxyhydroxides formed on steel surfaces Selected examples from both the basic science and the applied engineering points of view are presented Of special interest is the new structural information on ferric oxyhydroxides containing a small amount of alloying elements The text relates this to their various states and their role in corrosion processes

Physical Methods of Chemistry, Investigations of Surfaces and Interfaces Bryant W. Rossiter, Roger C. Baetzold, 1993-01-12 Each volume of this series heralds profound changes in both the perception and practice of chemistry This edition presents the state of the art of all important methods of instrumental chemical analysis measurement and control Contributions offer introductions together with sufficient detail to give a clear understanding of basic theory and apparatus involved and an appreciation of the value potential and limitations of the respective techniques The emphasis of the subjects treated is on method rather than results thus aiding the investigator in applying the techniques successfully in the laboratory

Dynamic Chemical Processes on Solid Surfaces Ken-ichi

Tanaka,2017-02-07 In this book the author determines that a surface is itself a new material for chemical reaction and the reaction of the surface provides additional new materials on that surface The revelation of that peculiarity is what makes this book different from an ordinary textbook and this new point of view will help to provide a new impetus when graduate students and researchers consider their results The reaction of surface atoms provides additional new compounds but these compounds cannot be detached from the surface Some compounds are passive but others work as catalysts One superior feature of the surface is the dynamic cooperation of two or more different functional materials or sites on the same surface This fact has been well established in the preferential oxidation of CO on platinum supported on a carbon nanotube with Ni MgO at its terminal end The Pt and Ni MgO are perfectly separated but these two are indispensable for the selective oxidation of CO in H₂ where the H₂O molecule plays a key role The reader will understand that the complexity of catalysis is due to the complexity of the dynamic processes on the surface

Surfaces and Interfaces II John Burke,2013-03-09

The Army Materials and Mechanics Research Center has conducted the Sagamore Army Materials Research Conferences in cooperation with the Metallurgical Research Laboratories of the Department of Chemical Engineering and Metallurgy of Syracuse University since 1954 The purpose of the conferences has been to gather together scientists and engineers from academic institutions industry and government who are uniquely qualified to explore in depth a subject of importance to the Army the Department of Defense and the scientific community This volume Surfaces and Interfaces II Physical and Mechanical Properties can be considered a continuation or perhaps an extension of the information contained in Surfaces and Interfaces I Chemical and Physical Characteristics The emphasis in this volume is focused on the technological significance of surfaces and interfaces surface sensitive mechanical properties environment sensitive properties control of grain structure and composite materials It is felt that the rather ambitious undertaking of the program committee to place the role of surfaces and interfaces in its proper context has been achieved The balance between basic research findings and more applied research allows the reader a certain degree of latitude in the use of the two volumes The continued active interest and support of these conferences by Col C T Riordan Commanding Officer Dr E Scala Technical Director and J F Sullivan Deputy Technical Director of the Army Materials and Mechanics Research Center is appreciated
