

Allow a minimum clearance of one inch (25.4 mm) around the unit for inspection and air circulation. Use flexible exhaust line, fuel line, battery cables, and electrical wires which meet USCG requirements.

The Onan MCCK electric generating sets are supplied with vibration cushions and a drip pan as shown in Figures 1 and 2. The cone-type cushions are mounted under the generator, and the tubular-type

cushions under the engine end of set. Add thin flat washers between snubber washer and flat washer at the generator end to maintain about 1/16-inch (1.6 mm) clearance as shown in Figure 2. On the left side of generator, install the pan bonding strap under the cap screw. Use hardware as shown.

Install the hold-down clamps to the drip pan front and rear. Secure clamps to the mounting base.

CAUTION

Install Siphon Break Kit #155-0950 in exhaust injection elbow is below load water line. Locate the Siphon Break at least 12 inches (305 mm) above load water line and in a vertical position. Remote mounting the siphon break is permissible within a 5 foot (1.5 m) radius of water injection exhaust elbow. Vertical position and height of valve must be maintained.

Recommended flush type thru-hull fitting and water filter.

CAUTION

Do not use scoop type water inlet fittings on generator sets using Aqualift muffler systems.
