

Carburetor

The carburetor (Figure 8-10) is not likely to cause problems and should be replaced only after all other problems have been eliminated (see Section 11, *Troubleshooting*). The carburetor fuel mixture adjustments are sealed at the factory. See Page 8-20 to connect the throttle link and to adjust the idle (throttle) stop screw.

Automatic Choke

The automatic choke is operated by a bi-metal/heat-er assembly and a vacuum breaker assembly (Figure 8-10). Conduct the following checks and adjustments before replacing a carburetor/choke assembly:

1. Apply 12 VDC across the heater terminals. The choke should open fully in 2 to 3 minutes.
2. Check the heater alignment marks and realign if out of alignment. The choke should be closed at temperatures below 70° F (21° C). It may be partly open above 70° F (21° C), but should close almost completely when vibrated (engine cranked).
3. The vacuum breaker diaphragm must not leak under a vacuum of 30 inches Hg (100 kPa). It should not take a vacuum greater than 2.4 inches Hg (8 kPa) to open the choke fully. At a vacuum of 1 inch Hg (3.2 kPa) the choke plate should be at the angle shown (Figure 8-10). If necessary, bend the link at the point shown, using two pliers.
