Poultry Magazine ,1915 *The Evolution of Animal Communication* William A. Searcy, Stephen Nowicki, 2010-01-01 Gull chicks beg for food from their parents Peacocks spread their tails to attract potential mates Meerkats alert family members of the approach of predators But are these and other animals sometimes dishonest That s what William Searcy and Stephen Nowicki ask in *The Evolution of Animal Communication* They take on the fascinating yet perplexing question of the dependability of animal signaling systems The book probes such phenomena as the begging of nesting birds alarm calls in squirrels and primates carotenoid coloration in fish and birds the calls of frogs and toads and weapon displays in crustaceans Do these signals convey accurate information about the signaler its future behavior or its environment Or do they mislead receivers in a way that benefits the signaler For example is the begging chick really hungry as its cries indicate or is it lobbying to get more food than its brothers and sisters Searcy and Nowicki take on these and other questions by developing clear definitions of key issues by reviewing the most relevant empirical data and game theory models available and by asking how well theory matches data They find that animal communication is largely reliable but that this basic reliability also allows the clever deceiver to flourish Well researched and clearly written their book provides new insight into animal communication behavior and evolution **Ornithology in Laboratory and Field** Olin Sewall Pettingill Jr., 2012-12-02 This new edition of *Ornithology in Laboratory and Field* continues to offer up to date coverage of the important aspects of modern ornithology Beginning with an overview of ornithology today Pettingill explores such topics as external and internal anatomy physiology ecology flight behavior migration life histories and populations *Evolutionary Psychology* Christopher Badcock, 2013-05-31 *Evolutionary Psychology A Critical Introduction* According to evolutionary biologists we are the minders of our genes But as Christopher Badcock points out in this book it is only recently that evolutionists have realized that minders need minds and that evolution needs psychology to fill the yawning gap between genes and behaviour *Evolutionary Psychology* assumes no prior knowledge of the subject and concentrates on the fundamental issues raised by the application of modern Darwinism to psychology Basic concepts of evolution are explained carefully so that the reader has a sound grasp of them before their often controversial application to psychology is discussed The approach is a critical one and the author does not hide the many difficulties that evolutionary psychology raises Examples include the strange neglect of Darwin s own writings on psychology and the fact that no existing theory has succeeded in explaining why the human brain evolved in the first place The book is the first to give a non technical account of remarkable new findings about the roles that conflicting genes play in building different parts of the brain It is also the first to consider the consequences of this for controversies like those over nature nurture IQ brain lateralization and consciousness *Evolutionary Psychology* is based on many years experience of teaching evolution and psychology to social science students and is intended for all who wish to get to grips with the basic issues of one of the most exciting and rapidly growing areas of modern science **Farm Journal and Country Gentleman** ,1921
