What is DevOps? Mike Loukides,2012-06-05 Have we entered the age of NoOps infrastructures Hardly Old style system administrators may be disappearing in the face of automation and cloud computing but operations have become more significant than ever As this O Reilly Radar Report explains we re moving into a more complex arrangement known as DevOps Mike Loukides O Reilly s VP of Content Strategy provides an incisive look into this new world of operations where IT specialists are becoming part of the development team In an environment with thousands of servers these specialists now write the code that maintains the infrastructure Even applications that run in the cloud have to be resilient and fault tolerant need to be monitored and must adjust to huge swings in load That was underscored by Amazon s EBS outage last year From the discussions at O Reilly s Velocity Conference it s evident that many operations specialists are quickly adapting to the DevOps reality But as a whole the industry has just scratched the surface This report tells you why

Deswegen begannen viele Internetanbieter natives IPv6 anzubieten und dem entsprechend auf die klassischen Übergangstechnologien wie z.B. Tunnel zu verzichten. IPv6 an sich bietet ein einfaches Autokonfigurationsverfahren, unterstützt allerdings nicht die automatische Präfix-Zuweisung. Für die automatische Präfix-Zuweisung wird ein effizientes Verfahren benötigt. Das Verfahren soll die Zuweisung von IPv6 Präfixen von einem ISP bis hin zu den Endgeräten des Kunden automatisieren. DHCPv6 mit der Präfix-Delegation Option stellt hierzu ein ideales Verfahren zur Verfügung. Mit diesem effizienten Verfahren wird das Leben sowohl der Internetanbieter als auch die der Internetanwender erleichtert. Der Internetanbieter will einen effizienten automatisierten Prozess, welcher seine Kunden zufriedenstellt. Der Internetanwender möchte wiederum seine Geräte einfach und komfortabel an das Netz anschließen und sich um keinerlei Konfigurationen kümmern. Darüber hinaus möchte der Kunde seine Geräte permanent verfügbar und gleichzeitig seine Daten geschützt wissen. Im Rahmen dieser Arbeit werden alle die oben genannten Aspekte im Verbund mit dem DHCPv6 Präfix-Delegation Verfahren erörtert.

LDAP System Administration Gerald Carter, 2003 Be more productive and make your life easier. That's what LDAP System Administration is all about. System administrators often spend a great deal of time managing configuration information located on many different machines: usernames, passwords, printer configurations, email client configurations, and network filesystem configurations, to name a few. LDAPv3 provides tools for centralizing all of the configuration information and placing it under your control. Rather than maintaining several administrative databases, NIS, Active Directory, Samba, and NFS configuration files, you can make changes in only one place and have all your systems immediately see the updated information. Practically platform independent, this book uses the widely available open source OpenLDAP 2 directory server as a premise for examples showing you how to use it to help you manage your configuration information effectively and securely. OpenLDAP 2 ships with most Linux distributions and Mac OS X and can be easily downloaded for most Unix-based systems. After introducing the workings of a directory service and the LDAP protocol, all aspects of building and installing OpenLDAP plus key ancillary packages like SASL and OpenSSL, this book discusses Configuration and access control, Distributed directories, replication and referral, Using OpenLDAP to replace NIS, Using OpenLDAP to manage email configurations, Using LDAP for abstraction with FTP and HTTP servers, Samba and Radius, Interoperating with different LDAP servers including Active Directory, Programming using Net LDAP. If you want to be a master of your domain, LDAP System Administration will help you get up and running quickly regardless of which LDAP

version you use After reading this book even with no previous LDAP experience you ll be able to integrate a directory server into essential network services such as mail DNS HTTP and SMB CIFS Computers in Libraries ,2002 IPv6 Essentials, 2nd Edition Silvia Hagen,2006 IPv6 Essentials Second Edition provides a succinct in depth tour of all the new features and functions in IPv6 It guides you through everything you need to know to get started including how to configure IPv6 on hosts and routers and which applications currently support IPv6 The new IPv6 protocols offers extended address space scalability improved support for security real time traffic support and auto configuration so that even a novice user can connect a machine to the Internet Aimed at system and network administrators engineers network designers and IT managers this book will help you understand plan for design and integrate IPv6 into your current IPv4 infrastructure Beginning with a short history of IPv6 author Silvia Hagen provides an overview of new functionality and discusses why we need IPv6 Hagen also shares exhaustive discussions of the new IPv6 header format and Extension Headers IPv6 address and ICMPv6 message format Security QoS Mobility and last but not least offers a Quick Start Guide for different operating systems IPv6 Essentials Second Edition also covers In depth technical guide to IPv6 Mechanisms and Case Studies that show how to integrate IPv6 into your network without interruption of IPv4 services Routing protocols and upper layer protocols Security in IPv6 concepts and requirements Includes the IPSEC framework and security elements available for authentication and encryption Quality of Service covers the elements available for QoS in IPv6 and how they can be implemented Detailed discussion of DHCPv6 and Mobile IPv6 Discussion of migration cost and business case Getting started on different operating systems Sun Solaris Linux BSD Windows XP and Cisco routers Whether you re ready to start implementing IPv6 today or are planning your strategy for the future IPv6 Essentials Second Edition will provide the solid foundation you need to get started Silvia s look at IPv6 is always refreshing as she translates complex technology features into business drivers and genuine end user benefits to enable building new business concepts based on end to end models Latif Ladid President IPv6 Forum Chair EU IPv6 Task Force
