

This is like a distribution in math.  $2(x+3) \rightarrow 2x+6$   
 Everything inside of the parentheses is multiplied by two.

b. What does the subscripted "2" inside the parentheses of the chemical formula tell you about the compound?

The subscript "2" outside of  $\text{Ba}(\text{NO}_2)_2$  the parentheses indicate that there are two of the polyatomic ion nitrite ( $\text{NO}_2^-$ ).

20. How many atoms of each element are in one formula unit of ammonium phosphate,  $(\text{NH}_4)_3\text{PO}_4$ ?

nitrogen	hydrogen	phosphorus	oxygen
3	12	1	4

21. A student writes the chemical formula for the ionic compound calcium hydroxide as  $\text{CaOH}_2$ .

a. Write the chemical formula for each ion in the compound.

Calcium:  $\text{Ca}^{+2}$  Hydroxide:  $\text{OH}^{-1}$

b. Why is the student's chemical formula for the compound calcium hydroxide wrong?

The subscript of "2" after hydrogen (H) indicate two hydrogens, not two hydroxide polyatomic ions. Parentheses should be placed around  $\text{OH}^{-1}$  and a subscript of "2" should be placed outside of the parentheses.

22. Many of the chemical formulas in Model 3 include parentheses. Which one of the following rules summarizes the appropriate use of parentheses in ternary ionic compounds? For the three rules that do not apply in all cases, show at least one counter example from the chemical formulas in Model 3.

Parentheses are used around any ion that is used more than once in a formula unit.

↳ Not true -  $\text{Al}_2(\text{CO}_3)_3$  - Al has more than one atom.

Parentheses are used around any polyatomic ion.

↳ Not true -  $\text{KNO}_3$  -  $\text{NO}_3^{-1}$  has no parentheses because there is only one.

Parentheses are used around any polyatomic ion used more than once in a formula unit.

↳ Not true -  $(\text{NH}_4)_3\text{PO}_4$  - ammonium is a polyatomic cation. ( $\text{NH}_4^{+}$ )

23. Write chemical formulas for the following ternary ionic compounds.

a. Calcium sulfate

b. Copper(II) nitrate

c. Lithium phosphate

d. Potassium permanganate

e. Aluminum sulfite

f. Magnesium bicarbonate

can **Investigations Into the Origins of Polyatomic Ions in Inductively Coupled Plasma-mass Spectrometry**, 2010

An inductively coupled plasma mass spectrometer ICP MS is an elemental analytical instrument capable of determining nearly all elements in the periodic table at limits of detection in the parts per quadrillion and with a linear analytical range over 8-10 orders of magnitude. Three concentric quartz tubes make up the plasma torch. Argon gas is spiraled through the outer tube and generates the plasma powered by a looped load coil operating at 27.1 or 40.6 MHz. The argon flow of the middle channel is used to keep the plasma above the innermost tube through which solid or aqueous sample is carried in a third argon stream. A sample is progressively desolvated, atomized, and ionized. The torch is operated at atmospheric pressure. To reach the reduced pressures of mass spectrometers, ions are extracted through a series of two approximately one millimeter wide circular apertures set in water-cooled metal cones. The space between the cones is evacuated to approximately one torr. The space behind the second cone is pumped down to or near to the pressure needed for the mass spectrometer. The first cone, called the sampler, is placed directly in the plasma plume and its position is adjusted to the point where atomic ions are most abundant. The hot plasma gas expands through the sampler orifice and in this expansion is placed the second cone, called the skimmer. After the skimmer, traditional MS designs are employed, i.e., quadrupoles, magnetic sectors, and time-of-flight. ICP MS is the leading trace element analysis technique. One of its weaknesses are polyatomic ions. This dissertation has added to the fundamental understanding of some of these polyatomic ions, their origins, and behavior. Although mainly continuing the work of others, certain novel approaches have been introduced here. Chapter 2 includes the first reported efforts to include high temperature corrections to the partition functions of the polyatomic ions in ICP MS. This and other objections to preceding papers in this area were addressed. Errors in the measured  $T_{\text{gas}}$  values were found for given errors in the experimental and spectroscopic values. The ionization energy of the neutral polyatomic ion was included in calculations to prove the validity of ignoring more complicated equilibria. Work was begun on the question of agreement between kinetics of the plasma and interface and the increase and depletion seen in certain polyatomic ions. This dissertation was also the first to report day-to-day ranges for  $T_{\text{gas}}$  values and to use a statistical test to compare different operating conditions. This will help guide comparisons of previous and future work. Chapter 4 was the first attempt to include the excited electronic state 2 in the partition function of ArO, as well as the first to address the different dissociation products of the ground and first electronic levels of ArO. Chapter 5 reports an interesting source of memory in ICP MS that could affect mathematical corrections for polyatomic ions. For future work on these topics, I suggest the following experiments and investigations. Clearly not an extensive list, they are instead the first topics curiosity brings to mind. 1. Measurement of  $T_{\text{gas}}$  values when using the flow injection technique of Appendix B. It was believed that there was a fundamental difference in the plasma when the auto-sampler was used versus a continuous injection. Is this reflected in  $T_{\text{gas}}$  values? 2. The work of Chapter 3 can be expanded and supplemented with more trials, new cone materials, i.e., copper, stainless steel, and more cone

geometries Some of this equipment is already present in the laboratory others could be purchased or made 3 Tgas values from Chapter 3 could be correlated with instrument pressures during the experiment Pressures after the skimmer cone were recorded for many days but have yet to be collated with the measured Tgas values 4 Chemistry Workbook For Dummies Peter J.
