Ryan, 2001-12-30 The field of physical anthropology deals with issues that everyone thinks about and cares about our origins our evolutionary history and why we look and act the way we do The field has benefited greatly by increased attention from the media from popular books and from several television series There is a multitude of topics considered by physical anthropologists including human and primate origins primate societies growth and development genetics forensic science and nutrition Most physical anthropology graduate students have traditionally aspired to research and or teaching careers at a university However during the last decade there has been an increased interest in non traditional careers outside the ivory tower primarily because the number of new physical anthropology Ph D s exceeds the number of jobs available in anthropology departments Because physical anthropology encompasses a variety of research interests students are broadly trained and have a wealth of talents and skills that make them competitive for non academic careers However pursuing opportunities outside the academy requires thoughtful planning and training This collection serves as a reference for students contemplating a career in physical anthropology within or outside the academy Several rewarding career paths that physical anthropologists have chosen are described Students will understand how anthropological theory methods and training are applicable to job responsibilities and career development This book will also help departments of anthropology design coursework and training programs that will make their students more competitive In sum the future of anthropology seems promising given the discipline's broad scope and concern for issues faced by

contemporary society and physical anthropologists will be playing an increased role in many arenas

A Practical Guide to Ecological Modelling Karline Soetaert, Peter M. J. Herman, 2008-10-21 Mathematical modelling is an essential tool in present day ecological research Yet for many ecologists it is still problematic to apply modelling in their research In our experience the major problem is at the conceptual level proper understanding of what a model is how ecological relations can be translated consistently into mathematical equations how models are solved steady states calculated and interpreted Many textbooks jump over these conceptual hurdles to dive into detailed formulations or the mathematics of solution This book attempts to fill that gap It introduces essential concepts for mathematical modelling explains the mathematics behind the methods and helps readers to implement models and obtain hands on experience Throughout the book emphasis is laid on how to translate ecological questions into interpretable models in a practical way The book aims to be an introductory textbook at the undergraduate graduate level but will also be useful to seduce experienced ecologists into the world of modelling The range of ecological models treated is wide from Lotka Volterra type of principle seeking models to environmental or ecosystem models and including matrix models lattice models and sequential decision models All chapters contain a concise introduction into the theory worked out examples and exercises All examples are implemented in the open source package R thus taking away problems of software availability for use of the book All code used in the book is available on a dedicated website
