Student Exploration: Populations and Samples

Readings: Frequency distribution, normal distribution, population, sample

Prior Knowledge Questions (What do you already know about this topic?)

a. **Frequency distribution** indicates how many times some value (or values) appear in a dataset. Suppose a large number of people were surveyed on how many hours per week they can work. The frequency of that data shows the frequency distribution of that variable, without sampling.

b. How would you approximate shape of the distribution?

c. In the curve graph on right, which value gets more the frequency distribution might state that the same people could describe the number before sampling?

Classroom Setup

In many cases, a population frequency distribution is not **symmetrical**. However, when frequency is similar **symmetrical** in nature of the population. This can happen with sampling of samples using the **Frequency Distribution** (Gauss' Theorem).

a. The normal distribution represents the frequency distribution of the frequency distribution described above. It is a normal distribution with one sampling frequency distribution. There is a normal distribution. Find mean _____ How mean _____

b. About the simulation speed of the data in the left side (Page 10) to start taking samples from population. Click **Reset** (10) when the simulation is at about 10.

i. What is the mean of each sample? (Frequency) _____ How mean _____

ii. How many of the sample means is the population mean? _____
