# Precambrian Continents and Plate Tectonics

## Content of Cratons

Little is known about the **paleogeography**, or ancient geography, of early Earth. The earliest continental crust is found in **cratons**, which are the ancient cores on continents. They also contain all three types of rocks that each tells their own story about the Precambrian era.

- Felsic igneous rocks are the remains of the first continents.
- Rounded sedimentary grains show that early rivers and seas existed and that erosion occurred.
- **Greenstone**, a metamorphic volcanic rock, shows the location of subduction zones because they are found in ocean trenches

### Study Tip

The forming of continents was similar to the forming of our planets: Many small pieces (microcontinents) collided to create bigger pieces.

*Notice the greenstone lining the Canadian shield, which has been exposed by the scraping of glaciers.*

## Formation from Cratons

**Shields** are where cratons crop out at the surface. Many Precambrian shields are about 570 million years old. Cratons covered by younger rocks are called **platforms**. When these platforms undergo erosion, the Precambrian craton is exposed.

## Early Crustal Plates

Early crustal plates were small due to faster mantle convection and stronger plate tectonics processes. These processes also created more subduction zones.

## Plate Tectonics

**Plate tectonics:** Smaller **microcontinents** collided to create bigger **supercontinents**, which resulted in the formation of massive mountain ranges. An active period of convergence was between 1.5 million and 1.0 million years ago. Cratons collided with microcontinents and oceanic island arcs to form **Laurentia**, which is part of the supercontinent **Rodinia**. Around 750 million years ago, oceans began forming in between continents as the result of Rodinia's disintegration.

Earth s present day environments are the outcome of a 4.5 billion year period of evolution reflecting the interaction of global scale geological and biological processes Punctuating that evolution were several extraordinary events and episodes that perturbed the entire Earth system and led to the creation of new environmental conditions sometimes even to fundamental changes in how planet Earth operated

Volume 3 Global Events and the Fennoscandian Arctic Russia Drilling Earth Project represents another kind of illustrated journey through the early Palaeoproterozoic provided by syntheses reviews and summaries of the current state of our understanding of a series of global events that resulted in a fundamental change of the Earth System from an anoxic to an oxic state The book discusses traces of life possible causes for the Huronian age glaciations addresses radical changes in carbon sulphur and phosphorus cycles during the Palaeoproterozoic and provides a comprehensive description and a rich photo documentation of the early Palaeoproterozoic supergiant petrified oil field Terrestrial environments are characterised through a critical review of available data on weathered and calichified surfaces and travertine deposits Potential implementation of Ca Mg Sr Fe Mo U and Re Os isotope systems for deciphering Palaeoproterozoic seawater chemistry and a change in the redox state of water and sedimentary columns are discussed The

volume considers in detail the definition of the oxic atmosphere possible causes for the oxygen rise and considers the oxidation of terrestrial environment not as a single event but a slow motion process lasting over hundreds of millions of years Finally the book provides a roadmap as to how the FAR DEEP cores may facilitate future interesting science and provide a new foundation for education in earth science community Welcome to the illustrative journey through one of the most exciting periods of planet Earth

**Earth System Evolution and Early Life** A.T. Brasier, D. McIlroy, N. McLoughlin, 2017-06-09 This volume in memory of Professor Martin Brasier which has many of his unfinished works summarizes recent progress in some of the hottest topics in palaeobiology including cellular preservation of early microbial life and early evolution of macroscopic animal life encompassing the Ediacara biota The papers focus on how to decipher evidence for early life which requires exceptional preservation employment of state of the art techniques and also an understanding gleaned from Phanerozoic lagersttte and modern analogues The papers also apply Martin's MOFAOTYOF principle my oldest fossils are older than your oldest fossils requiring an integrated approach to understanding fossils The adoption of the null hypothesis that all putative traces of life are abiotic until proven otherwise and the consideration of putative fossils within their spatial context characterized the work of Martin Brasier as is well demonstrated by the papers in this volume

**Early Life on Earth** David Wacey, 2009-01-29 When did life first appear on Earth and what form did it take The answer to this intriguing and fundamentally important question lies somewhere within the early Archean rock record The young Earth was however a very different place to that we know today and numerous pitfalls await our interpretation of these most ancient rocks The first half of this practical guide equips the reader with the background knowledge to successfully evaluate new potentially biological finds from the Archean rock record Successive steps are covered from locating promising samples in the field through standard petrography and evaluation of antiquity and biogenicity criteria to the latest state of the art geochemical techniques The second half of the

guide uniquely brings together all the materials that have been claimed to comprise the earliest fossil record into an easily accessible fully illustrated format This will be a handbook that every Archean geologist palaeobiologist and astrobiologist will wish to have in their backpack or on their lab bench      Ancient Supercontinents and the Paleogeography of Earth Lauri J. Glikson, 2014-08-05 Archaean terrains contain a wealth of structural stratigraphic textural mineralogical geochemical and isotopic features allowing insights into the nature of the early Earth This book is based on studies during 1964-2007 of Archaean terrains in Australia and to a lesser extent in South Africa and India as well as on visits to Archaean terrains in Canada the US and China as well as petrological and geochemical studies of igneous and sedimentary rock suites from a range of terrains The book will include a range of photographic and microscopic images geological sketch maps and diagrams illustrating the lessons derived from field and the laboratory Also other Archaean terrains are being reviewed The book is intended for Earth scientists as well as broader intelligent readership
