Advances in Automation and Robotics, Vol.1 Gary Lee, 2011-11-19 The international conference on Automation and Robotics ICAR2011 is held during December 12-13, 2011 in Dubai, UAE. The proceedings of ICAR2011 have been published by Springer Lecture Notes in Electrical Engineering, which include 163 excellent papers selected from more than 400 submitted papers. The conference is intended to bring together the researchers and engineers, technologists working in different aspects of intelligent control systems and optimization, robotics and automation, signal processing, sensors, systems modeling and control, industrial engineering, production and management. This part of the proceedings includes 81 papers contributed by many researchers in relevant topic areas covered at ICAR2011 from various countries such as France, Japan, USA, Korea, and China, etc. Many papers introduced their advanced research work; recently some of them gave a new solution to problems in the field with powerful evidence and detail demonstration. Others stated the application of their designed and realized systems. The session topic of this proceeding is intelligent control and robotics and automation, which includes papers about Distributed Control Systems, Intelligent Fault Detection and Identification, Machine Learning in Control, Neural Networks based Control Systems, Fuzzy Control, Genetic Algorithms, Robot Design, Human robots Interfaces, Network Robotics and Autonomous Systems, Industrial Networks and Automation, Modeling, Simulation and Architectures, Vision Recognition and Reconstruction, Virtual Reality, Image Processing, and so on. All of the papers here involved the authors' numerous time and energy; will be proved valuable in their research field. Sincere thanks to the committee and all the authors, moreover, anonymous reviewers from many fields and organizations. That is a power for all of us to go on research work for the world.

Contemporary Geometry Hung-Hsi Wu, 2013-06-29 Early one morning in April of 1987, the Chinese mathematician J. Q. Zhong died unexpectedly of a heart attack in New York. He was then near the end of a one-year visit in the United States. When news of his death reached his Chinese American friends, it was immediately decided by one and all that something should be done to preserve his memory. The present volume is an outgrowth of this sentiment. His friends in China have also established a Zhong Jia Qing Memorial Fund, which has since twice awarded the Zhong Jia Qing prizes for Chinese mathematics graduate students. It is hoped that at least part of the reasons for the esteem and affection in which he was held by all who knew him would come through in the succeeding pages of this volume. The three survey chapters by Li and Treibergs, Lu and Siu. Chapters 1-3 all center around the areas of mathematics in which Zhong made noteworthy contributions. In addition to putting Zhong's mathematical contributions in perspective, these articles should be useful also to a large segment of the mathematical community; together they give a coherent picture of a sizable portion of contemporary geometry. The survey of Lu differs from the other two in that it gives a firsthand account of the work done in the People's Republic of China in several complex variables in the last four decades.

 subjects individually the emphasis in both of these volumes is on the use of stochastic geometric and group theoretic
 concepts in the modeling of physical phenomena Stochastic Models Information Theory and Lie Groups will be of interest to
 advanced undergraduate and graduate students researchers and practitioners working in applied mathematics the physical
 sciences and engineering Extensive exercises and motivating examples make the work suitable as a textbook for use in

 It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet
 Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a
 special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles
 dealing with the various main directions in mathematics where a rather fine subdivi sion has been used The main
 requirement for these articles has been that they should give a reasonably complete up to date account of the current state of
 affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to
 mathematics students in their first specialization years to graduates from other mathematical areas and depending on the
 specific subject to specialists in other domains of science en gineers and teachers of mathematics These articles treat their
 material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area
 in question They also contain background and motivation rather than precise statements of precise theorems with detailed
 definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length
 contains more detailed concrete problems results and techniques **Mathematics of Surfaces XI** Malcolm Sabin,Ralph
