**Safety and Satisfaction among Patients In Connection with Staffing**  
**James Myers**  
**ABC University**

## **Abstract**

### **Background**

Recent surveys in different hospitals have shown that the lack of nurse staff results to a decrease in the satisfaction and safety among patients during their stay in the hospital. It is also found to further increase the risks involved in patient injuries. This capstone paper discusses the several reasons for this shortage in nursing staff, as well as the different ways in which patient satisfaction and safety can be improved.

### **Objective**

To achieve a better understanding of the negative implications of inadequate staffing or nurses in a facility, the development of a successful plan which promotes satisfaction and safety among patients, and the creation of a successful plan when it comes to improving staffing among hospitals.

### **Methodology**

Methods used in this study includes evidence-based practice, literature reviews, as well as clinical experience. The latter also included interviews with patients, nurses, as well as nurse managers about their views on satisfaction and safety in connection with staffing.

### **Conclusions**

Mandated ratio between nurse and patient and staffing according to patient acuity levels have both enhanced patient care. The implementation of a staffing program that is based on the levels of patient acuity would serve as a more viable solution compared to mandated ratio between nurses and patients. With the shortage of nurses entering the picture, hospitals need to find a way to maintain staffing in order to improve care among patients.
