**Sports-Related Concussions in Youth** National Research Council, Institute of Medicine, Board on Children, Youth, and Families, Committee on Sports-Related Concussions in Youth, 2014-02-04 In the past decade few subjects at the intersection of medicine and sports have generated as much public interest as sports related concussions especially among youth Despite growing awareness of sports related concussions and campaigns to educate athletes coaches physicians and parents of young athletes about concussion recognition and management confusion and controversy persist in many areas Currently diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity Sports Related Concussions in Youth Improving the Science Changing the Culture reviews the science of sports related concussions in youth from elementary school through young adulthood as well as in military personnel and their dependents This report recommends actions that can be taken by a range of audiences including research funding agencies legislatures state and school superintendents and athletic directors military organizations and equipment manufacturers as well as youth who participate in sports and their parents to improve what is known about concussions and to reduce their occurrence Sports Related Concussions in Youth finds that while some studies provide useful information much remains unknown about the extent of concussions in youth how to diagnose manage and prevent concussions and the short and long term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms The culture of sports negatively influences athletes self reporting of concussion symptoms and their adherence to return to play guidance Athletes their teammates and in some cases coaches and parents may not fully appreciate the health threats posed by concussions Similarly military recruits are immersed in a culture that includes devotion to duty and service before self and the critical nature of concussions may often go unheeded According to Sports Related Concussions in Youth if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered then the culture in which these athletes perform and compete will become much safer Improving understanding of the extent causes effects and prevention of sports related concussions is vitally important for the health and well being of youth athletes The findings and recommendations in this report set a direction for research to reach this goal

**Child's Play** Michael A. Messner, Michela Musto, 2016-05 Is sport good for kids When answering this question both critics and advocates of youth sports tend to fixate on matters of health whether condemning contact sports for their concussion risk or prescribing athletics as a cure for the childhood obesity epidemic Child s Play presents a more nuanced examination of the issue considering not only the physical impacts of youth athletics but its psychological and social ramifications as well The eleven original scholarly essays in this collection provide a probing look into how sports in community athletic leagues in schools and even on television play a major role in how young people view themselves shape their identities and imagine their place in society Rather than focusing exclusively on self proclaimed jocks the book considers how the culture of sports affects a wide variety of children and young people including those who opt out of athletics Not only does Child s Play examine disparities across lines of race class and gender it also offers detailed examinations of how various minority populations from transgender youth to Muslim immigrant girls have participated in youth sports Taken together these essays offer a wide range of approaches to understanding the sociology of youth sports including data driven analyses that examine national trends as well as ethnographic research that gives a voice to individual kids Child s Play thus presents a comprehensive and compelling analysis of how for better and for worse the culture of sports is integral to the development of young people and with them the future of our society

The Moral Conflict of Law and Neuroscience Peter A. Alces, 2018-01-24 Law relies on a conception of human agency the idea that humans are capable of making their own choices and are morally responsible for the consequences But what if that is not the case Over the past half century the story of the law has been one of increased acuity concerning the human condition especially the workings of the brain The law already considers select cognitive realities in evaluating questions of agency and responsibility such as age sanity and emotional distress As new neuroscientific research comprehensively calls into question the very idea of free will how should the law respond to this revised understanding Peter A Alces considers where and how the law currently fails to appreciate the neuroscientific revelation that humans may in key ways lack normative free will and therefore moral responsibility The most accessible setting in which to consider the potential impact of neuroscience is criminal law as certain aspects of criminal law already reveal the naivet of most normative reasoning such as the inconsistent treatment of people with equally disadvantageous cognitive deficits whether congenital or acquired But tort and contract law also assume a flawed conception of human agency and responsibility Alces reveals the internal contradictions of extant legal doctrine and concludes by considering what would be involved in constructing novel legal regimes based on emerging neuroscientific insights
