the grammatical collocational and pragmatic items but also provides valuable complementary information on the use of each lexical unit described. Examples are models with which users can form other sentences but are also instantiations of the language that escape systematicity and reflect unpredictable but real uses. Theoretical reflection on the theory of the example with special emphasis on the bilingual analysis of how especially bilingual dictionaries present examples and what kind of information each type of example provides can assist lexicographers in planning their dictionaries and making theoretically based choices when it comes to the selection and presentation of examples.

Dana Dannélls, Lars Borin, Karin Friberg Heppin, 2021-11-26 Large computational lexicons are central NLP resources. We believe it should be of particular interest to those who are or have been involved in language resource creation, development and evaluation.

English Studies from Archives to Prospects

Irena Zovko Dinković, Jelena Mihaljević Djigunović, 2016-06-22 This volume explores English Studies from the perspective of linguistics and applied linguistics. By examining developments within their selected topics, the authors of these 18 chapters provide a broad overview of English Studies as related to their specific points of interest. Topics range from the well established such as negation, grammaticalization and the role of culture in learning English to those that are currently being revisited or are considered relatively new such as corpus analysis, English as a lingua franca and third language acquisition. The chapters reflect a modern approach to linguistic and applied linguistic phenomena including diachronic and synchronic perspectives as well as quantitative and qualitative research paradigms. English Studies as practiced at the English Department in Zagreb during the last 80 years, the anniversary of which instigated the invitation of contributions for this collection, are presented here as a vibrant field characterized by dynamics and complexities that introduce novel ideas and help us embrace emerging aspects of more established concepts.
