Current Ornithology Richard Johnston, 2012-12-06 Volume 5 of this series continues its coverage of currently active research fields in ornithology Because an editor can never be a disinterested observer of his or her own editorial efforts any claim for superiority of this volume is not without conflict of interest Even so Volume 5 has certain merits that even a parent should acknowledge and I find the current chapters not merely timely and authoritative but compelling in their demand for a reader's attention Wolfgang and Roswitha Wiltschko provide a perceptive review of magnetic orientation in birds a piece dedicated to Fritz Merkel the pioneer in studies of magnetic orientation Sergei Kharitonov and Douglas Siegel Causey are concerned with the behavioral ecology of seabird coloniality emphasizing their field experiences in the USSR and the United States Ted Miller examines the application of studies of bird behavior to comparative biology pursuing the interface of behavior and evolutionary biology adumbrated by Konrad Lorenz in the 1930s Jeremy Raynor gives us a summary of the work over the past decade on bird flight which is not by turns as complex or as simple as we had formerly believed Carol Henderson describes recent developments in nongame bird conservation based on his pioneering work in the State of Minnesota Alan Kamil discusses optimal experimental design for research in ornithology a field in which experimental work is frequently difficult to pursue

Devil's Causeway Matthew Westfall, 2012-09-06 As the United States prosecuted a bloody campaign to pacify its newly won Philippines territory at the turn of the nineteenth century a secret mission of mercy went terribly wrong The result was a prisoner of war crisis the likes of which our nation had never encountered before The epic struggle for survival that followed was not only a test of the human will to live but a crucible for heroes And yet what was touted as a heroic rescue operation extended a war by almost two years and cost the lives of thousands In April 1899 Admiral George Dewey dispatched the USS Yorktown to liberate a detachment of Spanish soldiers under siege by Filipino rebels To reconnoiter enemy defenses one of the Yorktown's armed cutters manned by a crew of fifteen sailors was sent toward shore And then it happened Defying orders Lieutenant James C Gillmore Jr recklessly pushed upriver into heavy jungle and headlong into an ambush that would kill four of his men The survivors were dragged across mountains and through dense jungle from one pestilential prison to the next along what Gillmore called a veritable Devil's Causeway Their captivity and the torturous expedition sent to recover them recalled today as one of the greatest marches in US Army history features a tightly hewn cast of characters including a frail yet determined teenaged sailor and his hardened seafaring mates battle tested veterans of the Civil War and the Indian Wars and a fiery revolutionary commander who gave orders to bury wounded Americans alive A sweeping military epic drawing on international primary sources The Devil's Causeway tells their extraordinary story in its entirety for the first time

Optimization of Multistage Hydraulic Fracturing Treatment for Maximization of the Tight Gas Productivity Mengting Li, 2018-12-17 Hydraulic fracturing is essential technology for the

development of unconventional resources such as tight gas. So far there are no numerical tools which can optimize the whole process from geological modeling hydraulic fracturing until production simulation with the same 3D model with consideration of the thermo hydro mechanical coupling. In this dissertation a workflow and a numerical tool chain were developed for design and optimization of multistage hydraulic fracturing in horizontal well regarding a maximum productivity of the tight gas wellbore. After the verification a full 3D reservoir model is generated based on a real tight gas field in the North German Basin. Through analysis of simulation results a new calculation formula of FCD was proposed which takes the proppant position and concentration into account and can predict the gas production rate more accurately. However not only FCD but also proppant distribution and hydraulic connection of stimulated fractures to the well geological structure and the interaction between fractures are determinant for the gas production volume. Through analysis the numerical results of sensitivity analysis and optimization variations there is no unique criterion to determine the optimal number and spacing of the fractures it should be analyzed firstly in detail to the actual situation and decided then from case to case.

Taxonomy of the birds of the world fotolulu, 2018-10-30 How do you come up with the idea to list all the birds in the world including the subspecies and to give all birds English names? There is a reason for it my favorite saying whose author is unknown. Everyone said that's not possible then there was one who did not know that and just did it. I am an animal photographer and probably a little bit crazy. I've built a complete animal database for mammals and birds over the last decade. This facilitates my work in determining and archiving images and assigning keywords especially among the many subspecies. With this book I would like to give all birding friends and ornithologists a complete overview in English. For this I have given unique English names to all subspecies. The naming should not meet any scientific requirements. The names are based on translations from the Latin name geographical distribution areas and the names of the discoverers. The entries consist of the scientific name the English name the distribution areas and the author. I wish you a lot of fun with this book but especially while watching the fascinating birdlife. fotolulu
