Petrel User Manual 2011:

The Storm-petrels Rob Thomas, 2024-07-25 The first definitive work on the European Storm petrel and its relatives by one of the world's leading experts on the species. Imagine a bird as small as a sparrow which lives most of its life on the open ocean yet can survive for decades. It walks on water and migrates half way around the world returning to remote islands to breed underground often in the same rock crevice each year. At night it lays an enormous egg feeding its chick until the nestling weighs more than both parents put together. It seems to have little fear of humans but was itself feared by ancient seafarers. This might sound like the stuff of legend but is actually the description of a real creature: the storm petrel, walker on water, global wanderer, climate sentinel and open ocean survivor. In this beautifully written monograph Rob Thomas explores the remarkable life of the European Storm petrel, comparing and contrasting its behaviour and ecology across its range and with the other storm petrels of the world. We learn about their evolution, taxonomy, migration and adaptations to a life in the harsh open ocean while also discovering what these enigmatic seabirds are revealing about what humans are doing to our planet. Illustrated with 150 photographs and including the author's personal anecdotes and observations, *Storm Petrels* highlights some of the most exciting recent research findings and sets a trajectory for future discoveries.

Antarctic Krill and Interactions in the East Antarctic Ecosystem So Kawaguchi, Sophie Bestley, Martin Cox, Kerrie M. Swadling, Elanor Bell, 2025-08-19 Antarctic krill *Euphausia superba* is the target of the largest commercial fishery in the Southern Ocean. Its abundance varies regionally and exhibits great interannual variability. This natural variability combined with climate change effects could have substantial consequent impacts on krill predators and the magnitude of ecologically sustainable fishery catch limits. Recent increase in the krill catch is due to technological developments in both harvesting and catch processing methods as well as interest in new products derived from krill, e.g. dietary supplements and pet food. The krill fishery is managed by the Commission for the Conservation

of Antarctic Marine Living Resources CCAMLR The krill fishery first commenced in 1970 s off East Antarctica but the main fishing ground shifted to the South Atlantic sector from the 1990 s Interest to fish off East Antarctica has been expressed by CCAMLR Member nations in recent years and the krill fishery recommenced in Indian Ocean sector of East Antarctic sector in the 2016 17 fishing season Given the increase in recent commercial interest the trigger level total allowed catch in one of the management areas CCAMLR Subarea 48 1 has been reached seven times in the Southwest Atlantic the East Antarctic fishery is likely to expand in coming years CCAMLR employs an ecosystem based management approach This requires a wide range of data and information from across regional ecosystem components In the southwest Atlantic sector krill management is based on large scale krill biomass surveys undertaken in 2000 and 2019 together with various national Antarctic programs conducting annual regional scale monitoring this provides assessments of year to year variation of krill ecosystem parameters for CCAMLR to ensure harvesting is carried out in a sustainable manner Contrary to the relatively data rich Southwest Atlantic sector current precautionary catch limits for the krill fishery off East Antarctica are solely based on information collected through the two large scale multidisciplinary surveys conducted by Australia in Divisions 58 4 1 in 1996 and 58 4 2 in 2006 This Research Topic gathers up to date scientific analysis on the East Antarctic ecosystem arising from recent marine science voyages such as ENRICH Euphausiids and Nutrient Recycling In Cetacean Hotspots in 2019 and TEMPO Trends in Euphausiids off Mawson Predators and Oceanography in 2021 Our topic provides an opportunity to explore ecosystem wide scientific studies including non exclusively krill biomass ecosystem structure and interactions between krill krill predators oceanography and primary production to inform sustainable krill fishery management in the region
