Innovative Manufacturing Process

Using an automated process, our tank laminate is consistent in thickness and composition. The spiral material forming against the steel mold produces an inherently smooth finish, free of surface variations. The inside surface of our product is not exposed to air as it cures thus eliminating an additional cure flow. The result is a well-cured, high-gloss inner surface without the need for additional epoxy finish. Other manufacturing methods rely on manual hand applied resin coatings to combat surface cure problems.

Our proven performance and quality products have led the industry for over 40 years.
