**Bioengineering** Great Britain: Parliament: House of Commons: Science and Technology Committee, 2010-03-25 This report finds that the UK has an excellent research base but is still failing to maximise its potential by translating research into wealth and health The road to economic recovery will depend in part on exploitation of the UK's research base which in turn requires efficient translation to generate returns on investments Some areas of bioengineering such as stem cells have clearly benefited from strong Government leadership and support backed up by generous levels of funding from both the public and private sectors Others such as genetically modified GM crops are less well supported and funded This is curious when GM crops are considered by the Government to be safe and offer potential benefits GM crops are certainly the poor cousin in the bioengineering family and we strongly urge the Government to signal its support for GM crops as well as improving the regulatory situation in Europe Regulation of bioengineering is complex and researchers have found that regulations inhibit research and translation either because of regulatory complexity stem cells or a flawed operation of the regulatory process GM crops There are good indications that the UK is learning from past experiences in bioengineering when handling new emerging technologies such as synthetic biology The Government and Research Councils have recognised the value of synthetic biology early and are providing funding The Committee is also concerned that while research is well funded there is not enough forethought about synthetic biology translation for example developing DNA synthesis capability which would provide the UK with an excellent opportunity to get ahead internationally If this is not addressed synthetic biology runs the risk of becoming yet another story of the UK failing to capitalise on a strong research base and falling behind internationally

**Studying Virtual Math Teams** Gerry Stahl, 2010-05-03 Studying Virtual Math Teams centers on detailed empirical studies of how students in small online groups make sense of math issues and how they solve problems by making meaning together These studies are woven together with materials that describe the online environment and pedagogical orientation as well as reflections on the theoretical implications of the findings in the studies The nature of group cognition and shared meaning making in collaborative learning is a foundational research issue in CSCL More generally the theme of sense making is a central topic in information science While many authors allude to these topics few have provided this kind of detailed analysis of the mechanisms of intersubjective meaning making This book presents a coherent research agenda that has been pursued by the author and his research group The book opens with descriptions of the project and its methodology as well as situating this research in the past and present context of the CSCL research field The core research team then presents five concrete analyses of group interactions in different phases of the Virtual Math Teams research project These chapters are followed by several studies by international collaborators discussing the group discourse the software affordances and alternative representations of the interaction all using data from the VMT project The concluding chapters address implications for the theory of group cognition and for the methodology of the learning sciences In addition to substantial introductory and concluding chapters this important new book includes analyses based upon the author's previous research thereby providing smooth continuity and an engaging flow that follows the progression of the research The VMT project has dual goals a to provide a source of experience and data for practical and theoretical explorations of group knowledge building and b to develop an effective online environment and educational service for collaborative learning of mathematics Studying Virtual Math Teams reflects these twin orientations reviewing the intertwined aims and development of a rigorous science of small group cognition and a Web 2.0 educational math service It documents the kinds of interactional methods that small groups use to explore math issues and provides a glimpse into the potential of online interaction to promote productive math discourse
