Persson Success 17 Genes And Variation:

Genetics and Analysis of Quantitative Traits Bruce Walsh, Peter M. Visscher, Michael Lynch, 2025-08-21 Almost every trait in nature shows variation both within populations and between populations and species The field of quantitative genetics is the very broad umbrella that attempts to separate environmental from genetic sources of variation As a result it has powerful applications in animal and plant breeding evolution ecology medicine anthropology behaviour population genetics conservation biology genomics and statistics This second edition of *Genetics and Analysis of Quantitative Traits* is a fully rewritten and greatly expanded revision of the first edition published in 1998 which provided the first modern unified treatment of quantitative genetics In the past two decades there have been massive advancements in the field coupled with explosive growth in new quantitative methods those developments are covered in this new edition The book weaves important biological applications with a full development of the theory and appropriate statistical tools There are extensive discussions of important linear algebra tools linear and mixed models likelihood and Bayesian estimation as well as false discovery rates multiple comparisons and meta analysis More than 100 worked examples ranging from microbes to humans illustrate the key concepts using real world applications This extensive reference will be suitable for graduate level students and professional researchers both empiricists and theoreticians in the fields of evolutionary biology genetics and genomics It will also be of particular relevance and use to applied evolutionary biologists working in breed improvement for agriculture human geneticists and statisticians

The Black Death and Later Plague Epidemics in the Scandinavian Countries:

Ole Jørgen Benedictow, 2016-12-19 This monograph represents an expansion and deepening of previous works by Ole J Benedictow the author of highly esteemed monographs and articles on the history of plague epidemics and historical demography In the form of a collection of articles the author presents an in depth monographic study on the history of plague epidemics in Scandinavian countries and on controversies of the microbiological and epidemiological fundamentals of plague epidemics

Wienkers, 2019-05-20 This book continues to be the definitive reference on drug metabolism with an emphasis on new scientific and regulatory developments It has been updated based on developments that have occurred in the last 5 years with new chapters on large molecules disposition stereo selectivity in drug metabolism drug transporters and metabolic activation of drugs Some chapters have been prepared by new authors who have emerged as subject area experts in the decade that has passed since publication of the first edition

Plant Diversity Patterns and Drivers Qing Zhang, Gang Feng, Jinliang Liu, 2024-09-20 Biodiversity can provide a series of important ecosystem functions and ecosystem services which meet the needs of human beings Plants are the biological group with the highest carbon content on earth their diversity has attracted increased attention The interpretation of plant diversity patterns and drivers is crucial for the conservation and utilization of plant resources and is also one of the hot topics in plant science and ecology There are already many studies on the patterns and drivers of plant

diversity including different diversity dimensions e.g. taxonomic, phylogenetic and functional diversity and spatial scales different plots, sites, watershed, country, continent and globe. The mechanisms underlying plant diversity patterns are also quite complex. For example, many hypotheses are related to contemporary climate and soil conditions with temperature, precipitation and soil nutrient being the most discussed drivers. In addition, paleoclimate and geological events may also have a strong legacy on current plant diversity patterns. Except for these natural factors, many anthropogenic activities including agriculture, deforestation, grazing, urbanization and coal mining are also important drivers of plant diversity. These anthropogenic activities can affect plant diversity patterns not only directly but also indirectly through their effects on habitat loss and habitat fragmentation. Therefore, the current plant diversity patterns are the result of many interacting factors and need to be interpreted from a more comprehensive perspective. This Research Topic will therefore provide a platform for sufficient communication aiming to integrate the research from different fields and deepen the understanding of the patterns and drivers of plant diversity. We encourage the submission of theoretical and experimental studies on different plant groups such as seed plants, ferns, mosses and algae. Studies based on new methods and technology such as genomics and drones are also welcomed. We welcome the following specific topics:

- Effects of historical factors such as paleoclimate, geological events on plant diversity.
- Plant diversity that driven by contemporary climate and anthropogenic activities.
- The effect of habitat loss and fragmentation on plant diversity.
- New methods of research on the patterns and drivers of plant diversity.

Wildlife Habitat Conservation Michael L. Morrison, Heather A. Mathewson, 2015-05-15. Published in association with The Wildlife Society.

Invasion Genetics Spencer C. H. Barrett, Robert I. Colautti, Katrina M. Dlugosch, Loren H. Rieseberg, 2016-09-19. Invasion Genetics: the Baker, demographic genetics, the role of stochastic forces in the invasion process, the contemporary evolution of local adaptation, the significance of epigenetics and transgenerational plasticity for invasive species, the genomic consequences of colonization, the search for invasion genes and the comparative biology of invasive species. A wide diversity of invasive organisms are discussed including plants, animals, fungi and microbes.

Host and Microbe Adaptations in the Evolution of Immunity Larry J. Dishaw, Gary W. Litman, 2019-12-31. The evolution of metazoans has been accompanied by new interfaces with the microbial environment that include biological barriers and surveillance by specialized cell types. Increasingly complex organisms require increased capacities to confront pathogens achieved by co-evolution of recognition mechanisms and regulatory pathways. Two distinct but interactive forms of immunity have evolved. Innate immunity shared by all metazoans is traditionally viewed as simple and non-specific. Adaptive immunity possesses the capacity to anticipate new infectious challenges and recall previous exposures, the most well understood example of such a system exhibited by lymphocytes of vertebrates is based on somatic gene alterations that generate extraordinary specificity in discrimination of molecular structures. Our understanding of immune phylogeny over the past decades has tried to reconcile immunity from a vertebrate standpoint. While informative, such approaches cannot completely address the complex

nature of selective pressures brought to bear by the complex microbiota including pathogens that co exist with all metazoans In recent years comparative studies and new technologies have broadened our concepts of immunity from a systems wide perspective Unexpected findings e g genetic expansions of innate receptors high levels of polymorphism RNA based forms of generating diversity adaptive evolution and functional divergence of gene families and the recognition of novel mediators of adaptive immunity prompt us to reconsider the very nature of immunity Even fundamental paradigms as to how the jawed vertebrate adaptive immune system should be structured for optimal recognition potential have been disrupted more than once e g the discovery of the multicluster organization and germline joining of immunoglobulin genes in sharks gene conversion as a mechanism of somatic diversification absence of IgM or MHC II in certain teleost fishes Mechanistically concepts of innate immune memory often referred to as trained memory have been realized further with the development of new discoveries in studies of epigenetic regulation of somatic lineages Immune systems innovate and adapt in a taxon specific manner driven by the complexity of interactions with microbial symbionts commensals mutualists and pathogens Immune systems are shaped by selective forces that reflect consequences of dynamic interactions with microbial environments as well as a capacity for rapid change that can be facilitated by genomic instabilities We have learned that characterizing receptors and receptor interactions is not necessarily the most significant component in understanding the evolution of immunity Rather such a subject needs to be understood from a more global perspective and will necessitate re consideration of the physical barriers that afford protection and the developmental processes that create them By far the most significant paradigm shifts in our understanding of immunity and the infection process has been that microbes no longer are considered to be an automatic cause or consequence of illness but rather integral components of normal physiology and homeostasis Immune phylogeny has been shaped not only by an arms race with pathogens but also perhaps by mutualistic interactions with resident microbes This Research Topic updates and extends the previous eBook on Changing Views of the Evolution of Immunity and contains peer reviewed submissions of original research reviews and opinions

Involvement of Bioactive Peptides in the Control of Cell Survival, Proliferation and Plasticity in Physiological and Pathological Conditions, 2nd Edition David Vaudry,Dora Reglodi,2021-12-02 Publisher's note In this 2nd edition the following article has been added Editorial Involvement of Bioactive Peptides in the Control of Cell Survival Proliferation and Plasticity in Physiological and Pathological Conditions Neuronal Inputs and Outputs of Aging and Longevity Joy Alcedo,Thomas Flatt,Elena G. Pasyukova,2013-08-23 An animal's survival strongly depends on its ability to maintain homeostasis in response to the changing quality of its external and internal environments This is achieved through intercellular communication not only within a single tissue but also among different tissues and organ systems Thus alterations in tissue to tissue or organ to organ communications which are under genetic regulation can affect organismal homeostasis and consequently impact the aging process One of the organ systems that play a major role in maintaining

homeostasis is the nervous system Considering that the nervous system includes the sensory system which perceives the complexity of an animal's environment it should be no surprise that there would be a sensory influence on homeostasis and aging To promote homeostasis any given sensory information is transmitted through short range signals via neural circuits and or through long range endocrine signals to target tissues which may in turn be neuronal or non neuronal in nature At the same time since homeostasis involves a number of feedback mechanisms non neuronal tissues can also modulate sensory and other neuronal functions Several genes that regulate signaling pathways known to affect homeostasis and aging have been shown to act in neurons in tissues that are likely downstream targets of the nervous system or through feedback regulation of neuronal activities These genes can have different temporal requirements some might function early e g by affecting neural development while others may only be required later in adulthood Some well known examples of genes involved in the neuronal regulation of homeostasis and longevity encode components of the evolutionarily conserved nutrient sensing insulin like signaling pathway the stress sensing internal repair system and the mitochondrial electron transport chain Indeed the genetic perturbation of these pathways has been found to lead to numerous diseases many of which are age related and involve the nervous system such as neurodegeneration and the metabolic syndrome Despite much progress however many aspects of the neuronal inputs and outputs that affect aging and longevity are poorly understood to date For example the precise neuronal and non neuronal circuitries and the details of the molecular mechanisms through which genes signaling pathways maintain homeostasis and affect aging in response to the environment remain to be elucidated Similarly it is presently unclear whether genes that regulate the early development of the nervous system and its consequent circuitry influence homeostasis and longevity during adulthood At the same time although many genes affecting aging are conserved both the nervous system and the aging process are highly variable within populations and among taxa Accordingly the role of natural genetic variation in shaping the neurobiology of aging is also presently unknown The aim of this Research Topic is therefore to highlight the genetic developmental and physiological aspects of the signaling networks that mediate the neuronal inputs and outputs that are required to maintain organismal homeostasis The elucidation of the effects of these neuronal activities on homeostasis may thus provide much needed insight into mechanisms that affect aging and longevity

Baluska, 2013-03-09 This book provides a comprehensive and interactive view of recent advances in the cytology anatomy and physiology of roots as presented at the 5th International Symposium on Structure and Function of Roots held on 31 August 4 September 1998 in Star Lesn Slovakia This edition differs from previous ones by including some aspects of functional genetics and plant morphogenesis The book is intended to serve both students and researchers as a valuable source of updated information ideas and concepts dealing with the most fundamental questions of development and function of plant roots

Spirituality, Sport, and Doping: More than Just a Game Tracy J. Trothen, 2018-10-24 This book explores the deeper meaning of sports Drawing on contemporary research the author makes a strong case for why we should see sport not only in terms of religion but more importantly as a possible location for spiritual meaning Taking this a step farther she considers how gene editing robotics and other biomedical technological enhancements affect not only sports performances but experiences of sport as sacred In addition the author explores what difference it might make to the enhancement debate if sports spirituality is taken seriously The author is not afraid to explore the issue in all its complexity Yet the argument she presents is both meaningful and accessible This investigation applies insights from Christian theology applied ethics psychology and sports studies From lightweight tennis racquets to anabolic steroids athletes have long used technology and science to improve their performances But until now no one has asked how biomedical technological enhancements might affect the undervalued spiritual dimension of sport This book presents rich insights into the connection between sports spirituality and human enhancement technologies It will appeal to researchers athletes and sports followers and undergraduate and graduate students in ethics sport religion or theology **Evolutionary Biology: Contemporary and Historical Reflections Upon Core Theory** Thomas E. Dickins, Benjamin J.A. Dickins, 2023-03-08 This book is reflecting

upon core theories in evolutionary biology in a historical as well as contemporary context It exposes the main areas of interest for discussion but more importantly draws together hypotheses and future research directions The Modern Synthesis MS sometimes referred to as Standard Evolutionary Theory SET in evolutionary biology has been well documented and discussed but was also critically scrutinized over the last decade Researchers from diverse disciplinary backgrounds have claimed that there is a need for an extension to that theory and have called for an Extended Evolutionary Synthesis EES The book starts with an introductory chapter that summarizes the main points of the EES claim and indicates where those points

receive treatment later in the book This introduction to the subjects can either serve as an initiation for readers new to the debate or as a guide for those looking to pursue particular lines of enquiry The following chapters are organized around historical perspectives theoretical and philosophical approaches and the use of specific biological models to inspect core ideas Both empirical and theoretical contributions have been included The majority of chapters are addressing various aspects of the EES position and reflecting upon the MS Some of the chapters take historical perspectives analyzing various details of the MS and EES claims Others offer theoretical and philosophical analyses of the debate or take contemporary findings in biology and discuss those findings and their possible theoretical interpretations All of the chapters draw upon actual biology to make their points This book is written by practicing biologists and behavioral biologists historians and philosophers many of them working in interdisciplinary fields It is a valuable resource for historians and philosophers of biology as well as for biologists Chapters 8 20 22 and 33 are available open access under a Creative Commons Attribution 4 0 International License via link [springer.com](https://www.springer.com)

Woodley of Menie, 2018-07-04 The social sciences share a mission to shed light on human nature and society However there is no widely accepted meta theory no foundation from which variables can be linked causally sequenced or ultimately explained This book advances life history evolution as the missing meta theory for the social sciences Originally a biological theory for the variation between species research on life history evolution now encompasses psychological and sociological variation within the human species that has long been the stock and trade of social scientific study The eighteen chapters of this book review six disciplines eighteen authors and eighty two volumes published between 1734 and 2015 re reading the texts in the light of life history evolution
