

Writing the Persuasive Essay

What is a persuasive/argument essay?

In persuasive writing, a writer takes a position FOR or AGAINST an issue and writes to convince the reader to believe or do something.

Persuasive writing, also known as the argument essay, utilizes logic and reason to show that one idea is more legitimate than another idea. It attempts to persuade a reader to adopt a certain point of view or to take a particular action. The argument must always use sound reasoning and solid evidence by stating facts, giving logical reasons, using examples, and quoting experts.

When planning a persuasive essay, follow these steps

1. Choose your position. Which side of the issue or problem are you going to write about, and what solution will you offer? Know the purpose of your essay.
2. Analyze your audience. Decide if your audience agrees with you, is neutral, or disagrees with your position.
3. Research your topic. A persuasive essay must provide specific and convincing evidence. Often it is necessary to go beyond your own knowledge and experience. You might need to go to the library or interview people who are experts on your topic.
4. Structure your essay. Figure out what evidence you will include and in what order you will present the evidence. Remember to consider your purpose, your audience, and your topic.

The following criteria are essential to produce an effective argument

- Be well informed about your topic. To add to your knowledge of a topic, read thoroughly about it, using legitimate sources. Take notes.
- Test your thesis. Your thesis, i.e., argument, must have two sides. It must be debatable. If you can write down a thesis statement directly opposing your own, you will ensure that your own argument is debatable.
- Disprove the opposing argument. Understand the opposite viewpoint of your position and then counter it by providing contrasting evidence or by finding mistakes and inconsistencies in the logic of the opposing argument.
- Support your position with evidence. Remember that your evidence must appeal to reason.

Schooling by Design Grant Wiggins, Jay McTighe, 2007-07-15 Why despite years of trying have efforts to achieve lasting effective school reform fallen short What curricular and policy elements must be in place to move forward How should the roles of teachers and education leaders be defined to best support the point of school Grant Wiggins and Jay McTighe answer these and other questions in Schooling by Design Mission Action and Achievement Building on the premise of Understanding by Design their acclaimed framework for curriculum instruction and assessment the authors present a compelling argument for using the same approach to reach a grand goal the reform of schooling as a whole In their view reform rests on six pillars A relentless focus on the long term mission of school enabling learners to demonstrate understanding and mature habits of mind A curriculum and assessment framework that honors the mission and ensures that content coverage is no longer the accepted approach to instruction A set of principles of learning that support all decisions about pedagogy and planning Structures policies job descriptions practices and use of resources consistent with mission and learning principles An overall strategy that includes ongoing feedback and adjustment and A set of tactics linked to strategy including a planning process that uses backward design to accomplish the key work of reform Practical insightful and provocative Schooling by Design elaborates on each of these elements and presents educators with both the rationale and the methodology for closing the gap between what we say we want from school and what school actually delivers for turning vision into reality

Argumentation Mining Manfred Stede, Jodi Schneider, 2022-06-01 Argumentation mining is an application of natural language processing NLP that emerged a few years ago and has recently enjoyed considerable popularity as demonstrated by a series of international workshops and by a rising number of publications at the major conferences and journals of the field Its goals are to identify argumentation in text or dialogue to construct representations of the constellation of claims supporting and attacking moves in different levels of detail and to characterize the patterns of reasoning that appear to license the argumentation Furthermore recent work also addresses the difficult tasks of evaluating the persuasiveness and quality of arguments Some of the linguistic genres that are being studied include legal text student essays political discourse and debate newspaper editorials scientific writing and others The book starts with a discussion of the linguistic perspective characteristics of argumentative language and their relationship to certain other notions such as subjectivity Besides the connection to linguistics argumentation has for a long time been a topic

in Artificial Intelligence where the focus is on devising adequate representations and reasoning formalisms that capture the properties of argumentative exchange. It is generally very difficult to connect the two realms of reasoning and text analysis but we are convinced that it should be attempted in the long term and therefore we also touch upon some fundamentals of reasoning approaches. Then the book turns to its focus: the computational side of mining argumentation in text. We first introduce a number of annotated corpora that have been used in the research. From the NLP perspective, argumentation mining shares subtasks with research fields such as subjectivity and sentiment analysis, semantic relation extraction, and discourse parsing. Therefore, many technical approaches are being borrowed from those and other fields. We break argumentation mining into a series of subtasks starting with the preparatory steps of classifying text as argumentative or not and segmenting it into elementary units. Then central steps are the automatic identification of claims and finding statements that support or oppose the claim. For certain applications, it is also of interest to compute a full structure of an argumentative constellation of statements. Next, we discuss a few steps that try to dig deeper to infer the underlying reasoning pattern for a textual argument to reconstruct unstated premises, so-called enthymemes, and to evaluate the quality of the argumentation. We also take a brief look at the other side of mining, i.e., the generation or synthesis of argumentative text. The book finishes with a summary of the argumentation mining tasks, a sketch of potential applications, and a necessarily subjective outlook for the field.

How Students Write: A Linguistic Analysis Laura Louise Aull, 2020-04-01. Broad generalizations about people today are a familiar feature of first-year student writing. *How Students Write* brings a fresh perspective to this perennial observation using corpus linguistics techniques. This study analyzes sentence-level patterns in student writing to develop an understanding of how students present evidence, draw connections between ideas, relate to their readers, and ultimately learn to construct knowledge in their writing. Drawing on both first-year and upper-level student writing, the book examines the discourse of students at different points in their education. It also distinguishes between argumentative and analytic essays to explore the way school genres and assignments shape students' choices. In focusing on sentence-level features such as hedges, perhaps, and boosters, definitely, this study shows how such rhetorical choices work together to open or close opportunities for thoughtful exchanges of ideas. Attention to these features can help instructors foster civil discourse, design effective assignments, and expose and
