Quantifying Uncertainty in Subsurface Systems

Céline Scheidt, Lewis Li, Jef Caers, 2018-04-27 Under the Earth's surface is a rich array of geological resources many with potential use to humankind. However extracting and harnessing them comes with enormous uncertainties, high costs and considerable risks. The valuation of subsurface resources involves assessing discordant factors to produce a decision model that is functional and sustainable. This volume provides real world examples relating to oilfields, geothermal systems, contaminated sites and aquifer recharge. Volume highlights include: A multi-disciplinary treatment of uncertainty quantification. Case studies with actual data that will appeal to methodology developers. A Bayesian evidential learning framework that reduces computation and modeling time. Quantifying Uncertainty in Subsurface Systems is a multidisciplinary volume that brings together five major fields: information science, decision science, geosciences, data science and computer science. It will appeal to both students and practitioners and be a valuable resource for geoscientists, engineers and applied mathematicians. The Storm-petrels Rob Thomas, 2024-07-25 The first definitive work on the European Storm petrel and its relatives by one of the world's leading experts on the species. Imagine a bird as small as a sparrow which lives most of its life on the open ocean yet can survive for decades. It walks on water and migrates half way around the world, returning to remote islands to breed underground, often in the same rock crevice each year. At night it lays an enormous egg, feeding its chick until the nestling weighs more than both parents put together. It seems to have little fear of humans but was itself feared by ancient seafarers. This might sound like the stuff of legend but is actually the description of a real creature: the storm petrel, walker on water, global wanderer, climate sentinel and open ocean survivor. In this beautifully written monograph, Rob Thomas explores the remarkable life of the European Storm petrel, comparing and contrasting its behaviour and ecology across its range and with the other storm petrels of the world. We learn about their evolution, taxonomy, migration and adaptations to a life in the harsh open ocean while also discovering what these enigmatic seabirds are revealing about what humans are doing to our planet. Illustrated with 150 photographs and including the author's personal anecdotes and observations. Storm petrels highlights some of the most exciting recent research findings and sets a trajectory for future discoveries.

Land Cover and Land Use Change on Islands Stephen J. Walsh, Diego Riveros-Iregui, Javier Arce-Nazario, Philip H. Page, 2020-07-16 Globalization is not a new phenomenon but it is posing new challenges to humans and natural ecosystems in the 21st century From climate change to increasingly mobile human populations to the global economy the relationship between humans and their environment is being modified in ways that will have long term impacts on ecological health biodiversity ecosystem goods and services population vulnerability and sustainability These changes and challenges are perhaps nowhere more evident than in island ecosystems Buffeted by rising ocean temperatures extreme weather events sea level rise climate change tourism population migration invasive species and

resource limitations islands represent both the greatest vulnerability to globalization and also the greatest scientific opportunity to study the significance of global changes on ecosystem processes human environment interactions conservation environmental policy and island sustainability In this book we study islands through the lens of Land Cover Land Use Change LCLUC and the multi scale and multi thematic drivers of change In addition to assessing the key processes that shape and re shape island ecosystems and their land cover land use changes the book highlights measurement and assessment methods to characterize patterns and trajectories of change and models to examine the social ecological drivers of change on islands For instance chapters report on the results of a meta analysis to examine trends in published literature on islands a satellite image time series to track changes in urbanization social surveys to support household analyses field sampling to represent the state of resources and their limitations on islands and dynamic systems models to link socio economic data to LCLUC patterns The authors report on a diversity of islands conditions and circumstances that affect LCLUC patterns and processes often informed through perspectives rooted for instance in conservation demography ecology economics geography policy and sociology

Antarctic Krill and Interactions in the East Antarctic Ecosystem So Kawaguchi,Sophie Bestley,Martin Cox,Kerrie M. Swadling,Elanor Bell,2025-08-19 Antarctic krill *Euphausia superba* is the target of the largest commercial fishery in the Southern Ocean Its abundance varies regionally and exhibits great interannual variability This natural variability combined with climate change effects could have substantial consequent impacts on krill predators and the magnitude of ecologically sustainable fishery catch limits Recent increase in the krill catch is due to technological developments in both harvesting and catch processing methods as well as interest in new products derived from krill e g dietary supplements and pet food The krill fishery is managed by the Commission for the Conservation of Antarctic Marine

Living Resources CCAMLR The krill fishery first commenced in 1970 s off East Antarctica but the main fishing ground shifted to the South Atlantic sector from the 1990 s Interest to fish off East Antarctica has been expressed by CCAMLR Member nations in recent years and the krill fishery recommenced in Indian Ocean sector of East Antarctic sector in the 2016 17 fishing season Given the increase in recent commercial interest the trigger level total allowed catch in one of the management areas CCAMLR Subarea 48 1 has been reached seven times in the Southwest Atlantic the East Antarctic fishery is likely to expand in coming years CCAMLR employs an ecosystem based management approach This requires a wide range of data and information from across regional ecosystem components In the southwest Atlantic sector krill management is based on large scale krill biomass surveys undertaken in 2000 and 2019 together with various national Antarctic programs conducting annual regional scale monitoring this provides assessments of year to year variation of krill ecosystem parameters for CCAMLR to ensure harvesting is carried out in a sustainable manner Contrary to the relatively data rich Southwest Atlantic sector current precautionary catch limits for the krill fishery off East Antarctica are solely based on information collected through the two large scale multidisciplinary surveys conducted by Australia in Divisions 58 4 1 in 1996 and 58 4 2 in 2006 This Research Topic gathers up to date scientific analysis on the East Antarctic ecosystem arising from recent marine science voyages such as ENRICH Euphausiids and Nutrient Recycling In Cetacean Hotspots in 2019 and TEMPO Trends in Euphausiids off Mawson Predators and Oceanography in 2021 Our topic provides an opportunity to explore ecosystem wide scientific studies including non exclusively krill biomass ecosystem structure and interactions between krill krill predators oceanography and primary production to inform sustainable krill fishery management in the region

The Action Plan for Australian Birds 2020 Stephen T. Garnett, G Barry Baker, 2021-12-01 The Action Plan for Australian Birds 2020 is the most comprehensive review of the status of Australia s avifauna ever attempted The latest in a series of action plans for Australian birds that have been produced every decade since 1992 it is also the largest The accounts in this plan have been authored by more than 300 of the most knowledgeable bird experts in the country and feature far more detail than any of the earlier plans This volume also includes accounts of over 60 taxa that are no longer considered threatened mainly thanks to sustained conservation action over many decades This extensive book covers key themes that have emerged in the last decade including the increasing impact of climate change as a threatening process most obviously in Queensland s tropical rainforests where many birds are being pushed up the mountains However the effects are also indirect as happened in the catastrophic fires of 2019 20 Many of the newly listed birds are subspecies confined to Kangaroo Island where fire destroyed over half the population But there are good news stories too especially on islands where there have been spectacular successes with predator control Such uplifting results demonstrate that when action plans are followed by action on the ground threatened species can indeed be recovered and threats alleviated
